

hours at 1 kHz, and that's pretty much what I got. Even after long gaming sessions and daily use, I rarely found myself worrying about plugging it in.

When it does run low, you don't have to stop playing, just plug in the USB-C cable, and it instantly switches to wired mode with no lag. It's one of those little conveniences that make a big difference.

SOFTWARE AND CUSTOMISATION

Now, this is where things start to feel a bit limited. The Corsair Sabre V2 Pro Ultralight technically supports Corsair's iCUE software, but here's the catch, it doesn't show up on the desktop app. The mouse is only recognised on the web hub of iCUE, which means if you want to tweak your DPI settings, remap but-

tons, or check battery levels, you'll need to do it through a browser.

That's not the end of the world, but it's definitely not ideal. Having to open a webpage every time you want to make a small adjustment feels clunky, especially when Corsair's desktop app offers deeper control and smoother integration across their products.

Another thing that bugged me was the lack of dedicated DPI buttons. Coming from a Razer DeathAdder V2X, I really missed being able to switch sensitivity on the fly. With the Sabre, you're stuck with whatever DPI levels you've pre-set, and if you want to change them, you have to jump into the iCUE web interface.

For a mouse that's clearly built for competitive gaming, I wish Corsair had included at least one DPI switcher or

allowed better on-device adjustment. It's a small thing, but when you're deep in a game and need a quick sensitivity tweak, it makes a noticeable difference.

WHAT'S MISSING

Now, it's not perfect. For a ₹10,499 mouse, I did expect a bit more versatility. There's no Bluetooth, which feels like a miss in this price range. You can't just quickly pair it to a laptop or tablet without the dongle. So, if you are someone who uses your gaming mouse for work as well, it is a hassle to use on the go while travelling.

There's also no RGB lighting or flashy design elements, which might put off some people who like their setups to pop. Personally, I didn't miss it – the matte finish and subtle look actually grew on me – but it's definitely not a mouse that'll turn heads visually.

Then again, that's not what Corsair is going for here. This isn't a "showpiece" mouse; it's a tool for pure competitive performance. Every design decision reflects that focus.

VERDICT

After two weeks, I can say with confidence that the Corsair Sabre V2 Pro Ultralight absolutely lives up to the hype – just not in the flashy way some expect. It's not about RGB or extra buttons or fancy marketing. It's about performance, precision, and comfort and it nails all three.
