

its premium price, its contrast performance and black levels will struggle against competition from similarly priced OLED options.

DESIGN AND CONNECTIVITY

The main unit without the stands weighs around 24 kg, and it'll take some effort to lift and set it up on a desk or mount it. We propped it up on a desk. The inverted V-shaped stands are metal-built and strong.

The PX950's screen has extremely slim bezels on all three sides, and the bottom side has a notable chin with the Panasonic logo. Beneath this chin, you get buttons to power on/off the TV, change volume, input source, and also a slider for turning the mic on and off.

The bundled remote has a familiar look to some other remotes I have seen: a circular navigation button with buttons on top and bottom. The top half has the power button, Google Assistant and a Settings menu button. You get OTT hotkeys (Netflix, Prime Video, YouTube, etc.), home button, back button, volume rocker, mute button, live TV button, and an input button.

The remote can work over Bluetooth, which adds to the convenience of using the TV. That brings us to its connectivity options.

On the back of the TV reside the different ports: four HDMI 2.1 ports, 2 USB ports, Digital Audio Out, LAN, Antenna In, and AV In. One of these HDMI and

USB-A ports is situated on the left side of the TV with a slide-in cover. Since you would mostly have use with these two ports, it is good that they are placed in an easily accessible place.

Thanks to HDMI 2.1, the Auto Low Latency Mode (ALLM) in Game Mode reduces input lag, and casual gamers can feel a more responsive and smoother gameplay experience.

UI AND AUDIO

The Panasonic TV boots Google TV based on Android TV 11 OS. The TV has the June 2025 security patch at the time of writing this review. The Google TV interface is one of the most refined and user-friendly UI out there for modern Android TVs. Google TV shows content by genre and moods from different OTT platforms. So you may chance upon or easily find content you like. On top of that, you get access to a wide library of TV apps and videos on the Google Play Store. The UI feels smooth enough, so no hiccups sailing through the different screens and menus.

And at times when you want to project what's playing on your screen to the big screen, Chromecast functionality should come in handy.

Coming to audio, the 66W speakers sound loud and clear, with decent bass thanks to a built-in tweeter. For surround sound and other sound enhancements, you can enable Dolby Audio processing (including Dolby Atmos).

SHOULD YOU BUY IT?

The Panasonic TH-65PX950DX is a well-built 65-inch Mini LED TV that stands out for its bright, largely colour-accurate 4K HDR display and powerful 66W speakers with Dolby Atmos. It brings a premium viewing and audio experience backed by solid connectivity options like four HDMI 2.1 ports and Google TV software that feels decently fluid and familiar. For most users upgrading from a standard LED TV, it offers a meaningful step-up in clarity, colour depth, and overall experience.

That said, the PX950DX has its limits. The native contrast ratio of around 2,132:1, while decent for an IPS-type Mini LED panel, still falls short of what you get from OLEDs or higher-end VA-based Mini LED TVs in this range. Blooming around highlights, a cool colour tone, and a 60Hz native refresh rate also remind you that this isn't built for the most discerning cinephiles or gamers. At around Rs 1,70,000, alternatives like the LG C5 OLED, Samsung S85F OLED, LG QNED90T Mini LED and Sony Bravia 7 Mini LED can offer better contrast and motion performance if you value deeper blacks or gaming.

Still, the Panasonic PX950DX redeems itself with balanced brightness, rich HDR colour output, agreeable tone mapping, and strong audio quality.

—G. S. Vasan

SPECIFICATIONS

Display: 65-inch, Mini LED | Panel type: IPS-Black LCD | Display resolution: 3840 x 2160 (4K) | Native refresh rate: 60Hz | Supported HDR formats: HDR10+, Dolby Vision | Speakers: 66W | Audio formats: Dolby Atmos, DTS Studio Sound | Software: Google TV (Android TV 11) | Screen mirroring: Chromecast, Airtel | HDMI: 4 HDMI ports, ALLM, ARC/eARC (on HDMI 1) | Processor: 4x Cortex A73 chip (MediaTek MT5889) | Memory: 2 GB RAM, 32 GB ROM
