

## CAMERAS

The Find X9 Pro introduces OPPO's most ambitious camera system to date. It combines a new 1 by 1.28-inch LYT 828 main sensor, a 50 megapixel ultrawide and a large 1 by 1.56-inch 200 megapixel Hasselblad telephoto. The goal is clear. This is a telephoto first flagship.

The telephoto system is where the phone shines the most. The 200 megapixel sensor captures impressive detail at 3x and 6x, and even extended zoom levels remain cleaner than expected. Texture retention is excellent. Fine details such as animal fur and distant architectural elements maintain clarity without over-sharpening. Stabilisation is also highly effective, and long zoom shots often appear sharper and more stable than competing flagships.

The floating telephoto design enables genuine optical macro performance. Close-up shots benefit from natural depth of field and pleasant background compression that looks closer to a DSLR than a typical smartphone macro mode.

Low-light performance has improved on all lenses. Neon signage retains colour without clipping. Shadows stay controlled without excessive noise. Fireworks and high contrast night scenes show balanced exposures with clean blacks. HDR behaviour is more refined with sensible decisions in difficult backlit situations.

Colour science leans toward OPPO's signature warm and vibrant palette. Skies can appear slightly more saturated, and reds and pinks occasionally pop more than naturally. Most users will find the output visually pleasing, although purists may prefer a toned-down profile.

Portraits benefit from better subject separation and more accurate rendering of skin tones, especially in mixed artificial lighting.

While the camera system is not without small quirks, such as mild flare in extreme backlight or slight colour punch in daylight, the overall performance feels more consistent and advanced than last year. It is one of the most versatile and reliable imaging packages you can buy today.

## BATTERY LIFE AND CHARGING

The Find X9 Pro houses a 7500 mAh silicon-carbon battery. It is the largest battery ever used in a Find series flagship, and yet the phone still remains 8.25 millimetres thick. Battery life is outstanding. The phone lasted 26 hours and 12 minutes in the PCMark Battery Test and regularly delivered two full days of use.

The silicon-carbon chemistry is a long-term advantage. The battery is

designed to retain up to 80% of its capacity after five years of normal use, which is rare for a smartphone battery.

Charging is slower than typical OPPO standards. The phone took 1 hour and 31 minutes to go from 0 to 100 per cent in our test. OPPO supports 80-watt wired charging, 50-watt wireless charging and 10-watt reverse wireless charging. The slower full charge time appears deliberate to protect battery health and does not affect the phone's exceptional endurance.

## VERDICT

At Rs 1,09,999, the OPPO Find X9 Pro competes directly with the most capable premium smartphones of the year. Snapdragon 8 Elite Gen 5 rivals still hold the crown in peak synthetic performance. However, OPPO takes a different and more balanced approach.

The Find X9 Pro focuses on real-world reliability rather than chasing benchmark records. The telephoto system is one of the best available on any smartphone. Battery life is exceptional.

Sustained performance during gaming is impressive. The display is bright and comfortable. The design feels modern and refined.

If your priorities include photography, battery life and stable performance, the OPPO Find X9 Pro stands out as OPPO's most complete flagship yet.

—Siddharth Chauhan

## SPECIFICATIONS

Processor: MediaTek Dimensity 9500 | RAM: 16 GB LPDDR5X | Storage: 512 GB UFS 4.1 | GPU: Arm G1 Ultra | Display: 6.78-inch flat AMOLED | Camera (rear): 50MP + 50MP + 200MP + 2MP | Camera (Front): 50 MP | Battery: 7500 mAh | Charging: 80W wired, 50W wireless, 10W reverse wireless
