

Premium Flagship Phone

Judged on power, polish, and real-world excellence

Premium flagships in 2025 were not just an upgrade, they leapt forward. Brands pushed camera hardware to new extremes, displays became brighter and more colour-accurate, chipsets made AI-driven features genuinely useful, and battery efficiency improved despite higher performance. As design matured and software became more stable, the fight for the top spot came down to refinement, consistency, real-world performance and long-term reliability.

Zero1 Winner: Samsung Galaxy S25 Ultra

The Samsung Galaxy S25 Ultra takes the top position this year by delivering the most complete flagship experience. After years of fine-tuning, this feels like a mix of every lesson learned.

The Samsung Galaxy S25 Ultra's design is sharper, lighter and more durable, with a flatter profile that's easier to grip. Its 6.9-inch QHD+ AMOLED display is the brightest we've tested, with exceptional colour accuracy and HDR performance.

The 1-inch 200MP primary sensor delivers outstanding detail, cleaner shadows and noticeably better low-light performance. The upgraded periscope telephoto lenses bring more natural bokeh and improved stability at high zoom levels. Performance, with the Snapdragon 8 Elite, remains smooth in

both everyday use and heavy loads, especially in AI-driven features like object removal and generative backgrounds.

Runner-up: Vivo X200 Pro

The Vivo X200 Pro delivers one of the most impressive camera-focused experiences of the year. Vivo continues to push mobile photography further, and the X200 Pro's 1-inch sensor, combined with Zeiss optics, produces some of the most natural colour science we've seen. The portrait mode stands out for its optical clarity and beautifully controlled background separation.

The display is vibrant and sharp, and Vivo's software ensure smooth daily performance. Thermals remain under control even during sessions of 8K recording or extended gaming, and battery efficiency is surprisingly strong for the hardware inside.

Best Buy: Apple iPhone 17

The iPhone 17 earns its Best Buy award by offering a premium, well-balanced flagship experience at a very accessible price.

Apple's A18 chipset is one of the most efficient SoCs on the market, and performance is among the smoothest we've tested. The camera system does not chase extreme hardware specs but produces consistent results. The 48MP primary sensor improves dynamic range and nighttime imaging, and computational photography remains dependable for point-and-shoot.
