

Battery phones in 2025 truly levelled up. Big 7000mAh+ batteries became common, silicon-carbon tech went mainstream, and most phones simply started lasting longer without heating up or draining too fast. Whether it was social apps, maps, video calls or casual gaming, people could actually get through a full day with ease. In our proprietary Digit battery drain test, we saw clear differences in real-world endurance, and for this year's Digit Zero1 Awards, two phones clearly rose to the top for their efficiency, stability and everyday dependability.

Zero1 Winner: iQOO Z10

The iQOO Z10 takes the top spot this year because it offers something users really want from a battery phone: dependable endurance without compromise. With its 7,300mAh battery, efficient Snapdragon 7s Gen 3 chipset, and a design that keeps heat under control, the phone simply outlasted every other device we tested. In our Digit battery drain test, the Z10 consistently held a clear lead, finishing with significantly more battery left than competing models in the same conditions.

Battery Phone

Power that goes the distance

iQOO Z10
Price: ₹20,999

OnePlus Nord CE 5
Price: ₹24,999

A big reason for this performance is how steady the Z10 is. It doesn't throttle heavily under load, it maintains cool temperatures, and its power management is tuned in a way that avoids sudden drops even during longer usage sessions. The AMOLED display may have a slightly cooler colour profile, but it is bright, consistent, and doesn't push the battery unnecessarily hard. Add 90W fast charging to the mix, and the Z10 feels like a phone designed for people who simply can't afford mid-day top-ups.

Best Buy & Runner-up: OnePlus Nord CE 5

The OnePlus Nord CE 5 follows closely behind, earning both the Runner-Up position and our Best Buy Award. While its 7,100mAh battery is slightly smaller, the phone delivers a strong balance of price, performance and long-lasting backup. With the Dimensity 8350 Apex chip, LPDDR5X RAM, and faster UFS 3.1 storage, the Nord CE 5 feels quite powerful and responsive. Apps load quicker, animations feel smoother, and games can run at higher frame rates on supported titles.

In our proprietary Digit battery drain test, the Nord CE 5 didn't match the iQOO Z10's efficiency, but still performed well enough to stand out in its price range. It offers more natural colour tuning on its flat AMOLED display, solid thermal behaviour for everyday use, and quick 80W wired charging for those who want both speed and stamina.

What helps the Nord CE 5 earn the Best Buy title is its long-term value. Four years of promised OS updates and six years of security patches give it a longer lifespan than most phones in this segment. For users who want a phone that feels fast, reliable, and still delivers strong battery life, the Nord CE 5 is an excellent choice and a well-deserved winner of our Best Buy Award in the battery category.
