

Gaming laptops (₹60K-150K)

Sweet spot gaming machines

The Rs 60,000 to 1.5 lakh range is where many players buy their first genuinely capable gaming laptop. Over the course of 2025, this slice of the market has benefited from trickle down hardware, with mid-tier RTX and Radeon GPUs, modern mobile CPUs and fast memory all becoming common in relatively slim 15 and 16-inch chassis. The focus here is on getting smooth 1080p performance, occasional 1440p gaming and a machine that can still pass for a regular notebook in class or at the office.

Zero1 Winner and Best Buy: **Lenovo LOQ 15IRX10D3**

The Lenovo LOQ 15IRX10D3 pulls off a rare double in this segment, walking away with both the Zero1 Award and the Best Buy title. In our testing, its combination of a recent Intel Core processor and an RTX 40 series class GPU allowed it to top our charts in raw performance while still landing firmly in the value territory for this price band. At 1080p with high settings, it pushed comfortably high frame rates in modern AAA titles and sailed past the 100 fps mark in popular esports games, which is exactly what a high refresh panel needs to really shine.

Crucially, those numbers held up under extended stress. Lenovo's cooling design on the LOQ 15 kept CPU and GPU clocks steady during long gaming runs without letting the deck become uncomfortably hot where your hands rest. Noise levels did climb in the performance profile, but remained within expectations for a gaming laptop of this class.

The rest of the package helps seal its position at the top of this category. The 15.6-inch display offers a high refresh rate and respectable colour coverage, making it perfectly serviceable for casual photo work and binge-watching between matches. Battery life is not a headline feature for a gaming laptop, yet the LOQ 15IRX10D3 still managed decent unplugged endurance for browsing, classes and light work, adding to its appeal.

When you line up the performance numbers, thermals and build quality against its Indian pricing, the value story is straightforward. More expensive machines in this bracket did not pull far enough ahead in games to justify their premiums, while cheaper options often had to compromise on GPU

Lenovo LOQ 15IRX10D3
Price: ₹1,40,990

power, display quality or cooling. The Lenovo LOQ 15IRX10D3 struck the best overall balance, which is why it earns both the Zero1 crown for outright performance and the Best Buy tag for its excellent performance per rupee in the Rs 60K to 1.5 lakh gaming laptop segment.

Runner-up: **Alienware Aurora 16 AC16250**

Equipped with a fast Intel Core processor and a well-tuned RTX 5060 GPU, the Alienware delivered excellent 1080p and strong QHD gaming performance in our tests. Frame rates in demanding single player titles stayed high with settings dialed up, and competitive shooters ran smoothly at the panel's high refresh rate, which will please players who live in ranked lobbies.

Alienware's thermal design gives the Aurora 16 an edge in sustained workloads. The vapour chamber and dual fan setup kept clocks stable across long gaming sessions and heavier mixed use scenarios, from streaming and game capture to light 3D and creator work. The 16-inch display offers punchy colours and a fast refresh, while the keyboard benefits from Alienware's familiar layout and crisp actuation. It isn't as sharp a value play as the Lenovo LOQ 15IRX10D3, but for buyers who want a more premium build and the Alienware aesthetic without stepping into higher price bands, it stands out as a very capable contender.

Alienware Aurora 16 AC16250
Price: ₹1,49,990
