

Premium Truly Wireless Earphones

Better sound, adaptive listening

Premium TWS earphones in 2025 have shifted from focusing only on ANC and codec support to offering deeper personalisation, better call quality, and stronger reliability. Brands now use advanced DSP, improved mic arrays, and adaptive transparency modes to create wireless earphones that react smarter to surroundings. Battery life has become consistent across the segment, and users get better performance, more reliable connectivity, and sound that is tuned for practical use rather than lab claims.

Zero1 Winner: Apple AirPods Pro 3

The Apple AirPods Pro 3 takes the top spot for refining everything that made the previous generation reliable while boosting audio performance and ANC. Apple's new driver and adaptive audio processing offer cleaner mids and a more controlled low end, giving the AirPods Pro 3 a more balanced signature. Spatial audio also feels tighter, with head tracking that works smoothly across Apple devices.

ANC sees a clear improvement, especially in suppressing constant environmental noise. Apple's Adaptive Transparency mode remains one of the most natural-sounding in the

industry. Battery life stays stable at around 8 hours with ANC, and the case supports fast pairing across the Apple ecosystem.

Runner-up: JBL Tour Pro 3

The JBL Tour Pro 3 earns the runner-up spot for delivering strong ANC, energetic sound, and one of the most versatile companion apps in the segment. JBL's adaptive ANC handles city noise well, and the earphones remain comfortable over long listening sessions. The six-mic system offers improved background noise rejection during calls.

The Tour Pro 3 offers punchy bass with lively treble and forward vocals. Users can fine-tune the signature through JBL's extensive EQ options. Multipoint support, wireless charging, and solid battery life round out the experience. These buds delivers near-flagship quality at an accessible price, though the AirPods Pro 3 are overall leading.

Sony LinkBuds Fit
Price: ₹24,990

Best Buy: Sony LinkBuds Fit

Sony's LinkBuds Fit wins the Best Buy award for offering premium comfort, smart features, and surprisingly capable ANC at a much lower market price. It is designed for all-day use.

Sound tuning leans balanced to lightly warm, with clear mids and adequate bass extension. Sony's adaptive sound controls adjust ANC and transparency based on surroundings, and call quality benefits from Sony's multi-mic processing. Battery life is solid, and fast pairing improves convenience. It launched for Rs 24,990, but its current price of about Rs 15,000 makes the LinkBuds Fit the best value in the premium TWS space, giving a flagship experience without the flagship price.
