

**T**he mid-range TWS segment in 2025 has grown into one of the most competitive categories, with brands focusing on stronger ANC, better battery life, and reliable connectivity without pushing prices into premium territory. Sound tuning has improved, with most models offering cleaner mids, tighter bass, and more stable volume levels for daily use. Users now expect premium-like features such as multipoint, transparency modes, and custom EQ, and the latest models deliver these at reasonable prices.

### Zero1 Winner: Sony WF-C710N

The Sony WF-C710N leads with its mix of rounded and controlled sound, solid ANC, and comfortable fit. Sony's tuning

# Mid-range Truly Wireless Earphones

Premium-like sound and features without premium prices

**Sony WF-C710N**  
Price: ₹8,990

**Google Pixel Buds 2a**  
Price: ₹12,999

keeps vocals clear, instruments well separated, and bass tight without sounding boomy. For everyday use across music, podcasts, and calls, the WF-C710N feels stable and consistent.

ANC performance is a clear step above others in this price range, cutting down low-frequency noise effectively during commutes or office work. Battery life remains dependable with around 7 to 8 hours of listening, and Sony's companion app offers EQ presets, adjustable ANC levels, and customisable controls. At Rs 8,990, it offers the most complete package, making it the standout choice for users who want reliable performance across all areas.

### Runner-up & Best Buy: Google Pixel Buds 2a

The Google Pixel Buds 2a takes the runner-up position but also earns the Best Buy tag for its strong value in the mid-range segment. It focuses on balanced sound, ecosystem convenience, and clean call quality. Google's tuning delivers clear mids and detailed vocals, which work well for podcasts, acoustic music, and general everyday listening.

While the ANC is not as powerful as Sony's, it still handles moderate background noise well. Transparency mode is natural and easy on the ears, making it useful for outdoor walks or quick conversations. The Buds 2a also shines in software-driven extras like Fast Pair, smooth device switching, and hands-free Google Assistant.

Battery life is steady at around 7 hours (with ANC), and the lightweight fit makes it suitable for long sessions. For Android users, the Pixel Buds 2a sits in a sweet spot: strong sound, good ANC, smart ecosystem features, and dependable call clarity. Even though it costs more than Sony's model, the overall experience makes it the best value buy in the segment.

These two models show how far mid-range TWS earbuds have come, offering reliable ANC, pleasing sound, and features at prices that make everyday listening more accessible.
