

Budget Truly Wireless Earphones

Good sound, everyday convenience

The budget True Wireless earphones segment in 2025 looks to be focused on practical features that improve daily use rather than chasing after premium-grade specs. Brands now offer more stable connectivity, better microphones, and longer battery life at lower prices, making this category ideal for users who want reliable earphones without stretching their budget. The best models this year balance comfort, tuning, and ease of use while keeping costs in check.

Zero1 Winner and Best Buy: OnePlus Buds 4

The OnePlus Buds 4 takes the top spot and also earns the Best Buy tag because it offers the most complete feature set in the budget TWS category. OnePlus focuses on consistency, giving the Buds 4 strong codec support, clean call quality, and strong bass that suits most mainstream music. The tuning is energetic and engaging enough for everyday listening, avoiding the muddy low end that's common in this price bracket.

ANC performs better than what you would expect for this segment. It cuts down the low-frequency noise during commutes and reduces ambience in indoor spaces, making it useful for work calls and travel. The transparency mode is also very natural and easy to use outdoors. Battery life easily reaches up to a full day with the case, and fast pairing works smoothly across Android devices.

The design is lightweight and comfortable for long wear. Touch controls are responsive, and the OnePlus app gives access to EQ presets and firmware updates. At Rs 5,999, the Buds 4 deliver a great balance of sound quality, ANC, call clarity, and reliability, making them the clear winner and the best value option in the budget segment.

Runner-up: CMF Buds 2

The CMF Buds 2 earns the runner-up spot for offering impressive loudness, clean bass, and really solid battery life at a very accessible price. CMF focuses on balanced sound with good clarity, mid-presence, moderate bass, and comforting treble detail. The mids stay clear enough for vocals and for dialogue,

and the overall output remains stable even at higher volumes.

ANC is also good here, and the passive isolation works well because of the snug fit that keeps outside noise in check even during short commutes or crowded indoor spaces. Call quality is decent for indoor use, and handles everyday conversations without trouble. The latency remains low enough for casual video viewing or light gaming, so you do not feel much delay when watching content or playing quick sessions. Battery performance is strong too, offering around 6 to 7 hours of listening on a single charge, which makes it dependable for long study sessions, office use, or daily travel.

The design follows CMF's minimal aesthetic, and the case stays compact enough for pockets. The companion app adds useful extras like EQ control and custom button settings. At a price tag close to Rs 2,500, the CMF Buds 2 is one of the most affordable good-quality options, making it ideal for budget-focused or first-time TWS buyers.

These two models set the tone for the budget TWS segment by focusing on strong audio, comfort, and reliable everyday performance, offering users more value than ever at this price.
