

The graphics card market in 2025 has moved from early hints to full next gen launches. NVIDIA's RTX 50 series arrived with clear gains in ray tracing, frame generation and efficiency, while AMD's first RDNA 4 cards pushed strong performance at more accessible prices. High refresh 4K gaming, creator pipelines and AI workloads now sit together as core design targets for modern GPUs. Pricing has settled compared to the pandemic era, though true high end cards remain costly. Board partners focused on better cooling, quieter acoustics and sturdier power delivery, and standards like DisplayPort 2.1, HDMI 2.1a and improved AV1 encoders are now common. Driver stability has also improved. GPUs today are bought for far more than games, from local LLMs to video workflows and image generation, marking their evolution into everyday AI accelerators. This shift is already shaping how we test new cards in the Digit Lab, with more AI benchmarks on the way.

Zero1 winner: ZOTAC GAMING GeForce RTX 5090 ARCTICSTORM AIO

The ZOTAC GAMING GeForce RTX 5090 ARCTICSTORM AIO claims the Zero1 Award with dominant 4K and 5K performance and exceptional thermals. NVIDIA's flagship Blackwell GPU, combined with DLSS frame generation and ZOTAC's pre

ZOTAC GAMING GeForce RTX 5050 Twin Edge
Price: ₹28,000

installed liquid cooling loop, allows the card to hold high boost clocks while keeping noise impressively low during gaming, creation work or long render sessions.

Beyond gaming, the ARCTICSTORM AIO delivered excellent results in creator and AI tasks, handling 8K timelines, complex 3D scenes and local model inference with ease. The built-in radiator makes high end builds simpler, and power draw was reasonable for a card in this class. It is expensive, but its performance ceiling was unmatched in our stress tests.

Runner-up: ASUS ROG Astral GeForce RTX 5090

The ASUS ROG Astral GeForce RTX 5090 takes a strong first runner up position, landing surprisingly close to the Zero1 winner in many tests. It uses the same Blackwell GPU but relies on a massive triple fan cooler, which gives excellent thermals, low noise and high boost clocks under demanding, long duration workloads.

Add ASUS's strong power delivery, dual BIOS and restrained RGB, and the ROG Astral clearly targets enthusiasts who like room to undervolt or overclock.

ASUS ROG Astral GeForce RTX 5090
Price: ₹3,55,000

Best Buy: ZOTAC GAMING GeForce RTX 5050 Twin Edge

ZOTAC's GAMING GeForce RTX 5050 Twin Edge wins the Best Buy award for its strong performance per rupee, delivering smooth high refresh 1080p gaming and solid entry level 1440p results with reduced ray tracing.

DLSS frame generation lets the RTX 5050 outperform its raw raster numbers, especially in dense open world titles. ZOTAC's fan cooler ensures power needs stay modest.
