

OLED TV development in 2025 has focused on higher brightness, cleaner motion, and better processing that adapts picture quality to room conditions. Brands are pushing MLA panels, improved heat dissipation, and stronger upscaling to make HDR content look more consistent in daylight and in dim rooms. Gaming performance has also matured, with stable 4K 120 Hz support, lower latency, and better tone-mapping across consoles.

Zero1 Winner: Sony Bravia 8 II

The Sony Bravia 8 II takes the top spot for its refined motion handling, natural colour tone, and superior processing. Sony's XR processor continues to set the benchmark for upscaling and object-based HDR, giving the Bravia 8 II a clean, cinematic look that feels accurate across movies, sports, and streaming.

Sony's motion control remains a major strength, showing less stutter and artefacts in fast scenes. Dolby Vision is more stable compared to competing models, with better tone mapping in bright rooms. For gamers, the Bravia 8 II supports 4K 120 Hz, VRR, and ALLM, and the input lag stays low for competitive play. It launched at a starting price of Rs 2,46,990, but is available at a lower price. It is expensive, but the consistency in picture quality and Sony's strong colour tuning make it the best overall OLED TV this year.

OLED TVs

Brighter, sharper, truly flagship

Sony Bravia 8 II
Price (55-inch): ₹2,46,990

Samsung S95F
Price (55-inch): ₹1,74,990

Runner-up: LG G5

The LG G5 earns the runner-up position for delivering one of the brightest OLED panels thanks to its MLA (Micro Lens Array) technology. Peak brightness is significantly higher than most competing models, which helps HDR films appear punchier and more impactful. LG's α11 AI processor improves texture detail and reduces noise in low-bitrate content, making streamed shows look cleaner.

The G5 is also one of the best TVs for gaming. With four HDMI 2.1 ports, 4K 120 Hz, VRR, ALLM, and LG's Game Optimiser mode, it provides more flexibility than most OLEDs. WebOS remains feature-rich with a large app library. While it still costs more than Samsung's and Sony's models, the G5's brightness and gaming flexibility make it a strong premium choice.

LG G5
Price (55-inch):
₹2,67,990

Best Buy: Samsung S95F

Samsung's S95F wins the Best Buy tag for offering top-tier QD-OLED performance at a more accessible price. The QD-OLED panel delivers vibrant colours, excellent HDR impact, and higher peak brightness than standard OLEDs. Samsung's processing enhances detail in both bright and dark scenes, and the results are sharp across streaming and native 4K content.

The S95F is a solid pick for games with 4K 165 Hz, low input lag, and a clean Game Bar interface. Motion is smooth, and the panel offers better colour volume than WRGB OLED models. Tizen OS is fast, app-rich, and easy to navigate. At the time of testing this, the S95F costs higher than its launch price of Rs 1,74,990, it delivers impressive picture quality at a price that undercuts other OLEDs, earning it the Best Buy position.
