

Mini LED TVs

Brighter highlights, better local dimming

Mini LED TVs in 2025 continue to push brightness, contrast control, and local dimming precision. The segment has become a strong alternative to OLED for brightly lit rooms, offering higher peak luminance, reduced risk of image retention, and better HDR impact. Brands are now refining dimming algorithms, improving colour accuracy, and adding gaming-focused features that make these TVs versatile for both content and console users. This year's top picks stand out for their balance of performance, processing quality, and real-world value.

Zero1 Winner: Sony Bravia 5

The Sony Bravia 5 leads the list for its excellent local dimming performance, natural colour tone, and Sony's reliable XR picture processing. Compared to most Mini LED sets, the Bravia 5 maintains deeper blacks with minimal blooming, especially in high-contrast HDR scenes. SDR upscaling is clean, motion handling is smooth, and Sony's tone mapping keeps highlights controlled without crushing details in darker areas.

It's also good for gaming. With 4K 120Hz, VRR, and low input lag, it handles console gaming well. Dolby Vision is well-tuned, and Sony's processing helps content look sharper even at lower bitrates. At Rs 1,37,740, the Bravia 5 gives the most consistent Mini LED experience, making it our winner for viewers who want accuracy and refined picture quality.

Lumio Vision 9
Price (55-inch): ₹59,999

Sony Bravia 5
Price (55-inch): ₹1,37,740

Runner-up: LG QNED 92A

The LG QNED 92A secures the runner-up spot for its bright Mini LED panel, strong colour volume, and smooth WebOS experience. LG's dimming control has improved, resulting in cleaner HDR highlights and better contrast than many earlier QNED models. The panel handles bright living rooms well, with excellent visibility and punchy colours even during daytime viewing.

Gaming performance is a highlight, with four HDMI 2.1 ports, 4K 120 Hz, VRR, and ALLM giving it more flexibility than most TVs in this price range. LG's Game Optimiser mode provides reduced latency and smoother visuals. The QNED 92A is ideal for users who want bright, vivid Mini LED performance paired with a robust smart TV interface. While it costs slightly more than the Sony, the added gaming convenience makes it a solid premium choice.

LG QNED 92A
Price (55-inch): ₹1,49,990

Best Buy: Lumio Vision 9

The Lumio Vision 9 wins the Best Buy award for bringing Mini LEDs to a much more accessible price point. It offers strong brightness, wide colour performance, and good local dimming for HDR viewing. While it doesn't match the processing finesse or motion stability of Sony and LG, it still has impressive contrast and vibrant colours for movies, sports, and OTT content.

Gaming support is decent for normal play, but not high-end gaming. You get 4K 60 Hz with Auto Low Latency Mode. The Google TV interface is easy to use, and the overall build quality is good. At Rs 59,999, the Vision 9 stands out for users who want Mini LED performance without paying premium pricing.
