

Building the Next Chapter of Digit in 2026

As we step into 2026, it's worth pausing for a moment – not to look back with nostalgia, but to take stock of how far Digit has come, and more importantly, the direction we are headed in.

The past year has been nothing short of exceptional for Digit. Across our website, video platforms and social media channels, we've seen sustained, meaningful growth. Our audience has grown not just in numbers, but in engagement, loyalty and trust. In an increasingly noisy digital landscape, that matters more than ever.

Digit reclaimed its position as one of India's fastest-growing tech publishers. Regaining the No 1 spot on Comscore and consistently maintaining a top-three position through the year wasn't just a statistical milestone, it was validation that rigorous testing, credible journalism and audience-first storytelling still win in the long run.

Our IPs played a significant role in this momentum. From the scale and credibility of the Digit Zero1 Awards, to the focused conversations at Snapdragon Auto Day, and the grassroots energy of the SKOAR Delhi Cup, these platforms brought together brands, creators, communities and consumers in ways that feel authentic and impactful.

That said, this growth has unfolded against a backdrop of rapid change. News and media publishers are navigating one of the most challenging transitions in decades. AI tools are reshaping how content is produced, discovered and consumed. Search is evolving. Platforms are fragmenting. Attention is harder to earn and easier to lose.

But if there's one emotion that defines how we enter 2026, it's optimism.

At Digit, we've always believed that technology journalism must evolve with technology itself. The year ahead reflects that belief. Our upcoming website revamp will make it easier than ever for readers to discover products, compare categories and

“To adapt without losing our core. To embrace AI without surrendering credibility. And to continue setting benchmarks, not chasing them.”

make informed decisions. We're investing further in our testing capabilities because in an AI-driven world, trust is built through transparency and repeatability.

We're also preparing to launch an AI-powered store for PCs, exploring smarter, more contextual ways to help readers navigate buying decisions. Alongside this, we'll continue experimenting with new formats, platforms and distribution models to reach viewers where they are, not where they used to be.

Video remains a central pillar of this strategy. The Digit Show will continue to expand its reach, deepen conversations and bring complex technology stories to life in a way that feels accessible, engaging and authoritative.

Another key focus area for 2026 is esports. Through SKOAR, we are doubling down on building a genuine gaming community – one that goes beyond screens. More tournaments, more offline touchpoints and more opportunities for India's student and amateur esports ecosystem to thrive are firmly on the roadmap.

All of this is rooted in a simple idea that has guided Digit from day one: test technology the right way, tell stories that matter and never underestimate the intelligence of your audience.

The Digit Zero1 Awards continue to embody that philosophy. They remain uncompromising, performance-led and fiercely independent because excellence deserves to be measured without shortcuts. Alongside Zero1, our Best Buy and Popular Choice Awards ensure that both value and community voices remain central to how we evaluate technology in India.

As we move forward, the ambition is clear. Not just to grow bigger but to grow better. To adapt without losing our core. To embrace AI without surrendering credibility. And to continue setting benchmarks, not chasing them.

2026 isn't just another year for Digit. It's the beginning of the next phase.

And we're just getting started. **1**
