

■ **MAJOR SOFTWARE & OS UPDATES**

Google Android 16 update brings AI notification summary

Google has announced Android 16, introducing smarter, more personalised, and easier-to-manage features, along with a major change in how updates are delivered. Instead of a single annual release, Android improvements will now roll out more frequently, giving users faster access to new tools. A key highlight is AI-powered notification summaries that condense long messages and busy group chats into short, readable highlights. A new notification organiser also groups and silences low-priority alerts like promotions and social media updates. Personalisation gets a boost with new icon shapes, system-wide themed icons, and a dark mode that can darken apps without native support. Android 16 also adds built-in parental controls within Settings, allowing parents to manage screen time, app access, and downtime. tinyurl.com/28gds12

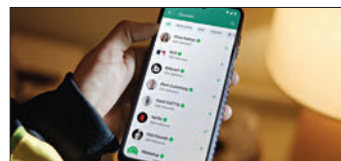

Android users can share live video in emergencies

Google has launched Emergency Live Video for Android, letting dispatchers request live video during emergencies, helping responders assess situations much faster and efficiently. It is rolling out in the US, Germany, and Mexico.. tinyurl.com/s7f1gsv

WhatsApp adds new features : Festive AI images, missed-call messages

WhatsApp launched updates adding missed call messages, AI image generation, animated Status, music and improved desktop media to make conversations more engaging. tinyurl.com/s67a1s

LG has rolled out updates for webOS with faster access to news content

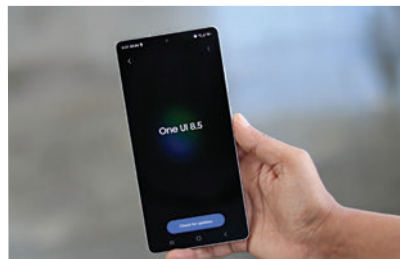

LG Electronics updated webOS with a dedicated news hub, deeper Haystack News integration, and UI refinements, adding browser upgrades to make news faster. tinyurl.com/s17fyws

■ **UI UPDATES AND FIXES**

Samsung One UI 8.5 second beta fixes missing camera features

Samsung has quietly restored the Single Take and Dual Rec camera features in One UI 8.5 Beta 2 after backlash from photography enthusiasts. The two modes were

removed from the default Camera app in the first One UI 8.5 beta, despite being popular among power users. According to SamMobile, both features

can now be re-enabled through Samsung's Camera Assistant app, available via the Galaxy Store. Users will find toggles for Single Take and Dual Rec under the "Additional modes" section, after which the options reappear in the Camera app. Single Take captures multiple photos and short video clips in different styles with one sweep, while Dual Rec records video using two cameras simultaneously. Samsung appears to be repositioning these tools as optional features to simplify the default camera experience. One UI 8.5 is expected to debut with the Galaxy S26 series before rolling out to older Galaxy smartphones and tablets in 2026. tinyurl.com/s2q1vyhu
