

INTO THE FUTURE

TOP TECH
TRENDS 2026

Imaging: Nikhil Wahal

Welcome to 2026, a year defined by "practical futurism," where the tech world is finally balancing sci-fi ambition with old-school utility. While agentic AI, mainstream foldables, and smart glasses push boundaries, the industry is also pivoting back to sensible basics – reviving microSD slots, prioritising repairability, and demanding smart home gadgets that actually last. This shift is particularly vital for India, where consumers demand bleeding-edge innovation that respects value and longevity. To decode this landscape, we present a comprehensive tour of the year's defining trends, featuring exclusive perspectives and strategic insights from industry leaders at OnePlus, HiSense, Oppo, Lumio, Flipkart, Amazon, Microsoft, Katonic, JioStar, Ericsson, ElevenLabs, Snowflake, HP, Lenovo, Dell, MSI, Qualcomm, Xiaomi, Dolby, Sennheiser, Nothing, Pure Storage, Indeed, and Acronis. Join us as we explore how these major players are navigating a year where the "wow factor" must finally meet the "why factor" for the everyday user who just wants things to work seamlessly, reliably, and without fuss.
