

pumped up in the EQ, the headset lacks that physical rumble or the “bass-y” feel you get from more music-focused audio options like a JBL Tour One M3. It is adequate for casual listening, but it clearly prioritizes competitive clarity over cinematic thump.

THE REALITY CHECK

While the in-game audio is stellar, the passive isolation left me wanting more. I took the Pelta on a coffee run, and I could hear way too much of the outside world. The sounds were muffled but still loud enough to be distracting, forcing me to crank the volume up to uncomfortable levels. It lacks Active Noise Cancellation, which is a tough pill to swallow when you look at the price tag.

Battery life, however, is a triumph. I managed to squeeze nearly 70 hours out of it in 2.4 GHz mode with the RGB lights off. I practically only charged it when the thought randomly occurred to me. I also tested the fast charging claim. After exactly 15 minutes on the charger, I got 4 hours and 37 minutes of playback. For someone who constantly forgets to plug things in, this is a lifesaver.

VERDICT

This brings me to the difficult part. If I

view this through the lens of an Indian gamer, the math is tricky. At ₹20,000, the ROG Pelta would be an absolute steal. But at its current street price of around ₹25,000, it is fighting in a different weight class.

The strengths are undeniable for our specific conditions. The 70+ hour battery life crushes the Razer BlackShark V2 Pro and the Logitech G Pro X 2. In a country where power cuts are real, and we might need one headset for a PC, PS5, and a BGMI session on mobile during a commute, that versatility is gold. Plus, the breathable earcups are far better suited for the humidity here in Mumbai than the leatherette ovens found on some competitors.

But here is the rub. You can get the Razer BlackShark V2 Pro for around ₹19,000. It offers similar low-latency performance and great spatial audio. If you do not mind the extra weight or the Razer software, it is the better budget pick. Alternatively, the Logitech G Pro X 2 is often available for around ₹21,000 and offers features like swappable earpads that may suit some users more.

If you are living in a noisy apartment in a city like Mumbai or Delhi, the lack of ANC on the Pelta just might be a dealbreaker at ₹29,000.

I really like the ROG Pelta. It is sleek, it sounds incredible, the microphone is surprisingly clear, and it lasts forever on a single charge. If you prioritize feather-light comfort and seamless cross-device compatibility, it is a fantastic piece of kit. ASUS also generally offers better warranty support here than Razer, which counts for something.

My advice? If you have the budget, go for it. You will not be disappointed by the performance. But if you are value-hunting, wait for it go on sale. If you can snag this for under ₹22,000, it changes from a “maybe” to a “must-buy.”

—Vyom Ramani

SPECIFICATIONS

Drivers: 50mm Titanium-plated Diaphragm | Frequency response: 20 Hz - 20k Hz | Impedance: 32 Ohm | Latency: 20ms | Mic: 10 mm detachable unidirectional boom | Mic Response: 100 Hz - 10k Hz | Connectivity: 2.4 GHz, Bluetooth, USB-C Wired | Battery: Upto 70 Hours | Software: Armoury Crate | Compatibility: PC, Mac, PS4, PS5, Nintendo Switch, Mobile (No Xbox support) | Weight: 309g
