

SDR shows like Friends look respectable, but Sony offers a more accurate presentation. I watched everything in Filmmaker Mode. Skin tones in interview segments and shows like Severance look close to natural, sitting only slightly behind the Sony panel.

Overall, the experience is solid. But there were some occasions where the TV struggled. In the nighttime scenes from Godzilla Minus One (yes, the Shirakawa base attack sequence), the S95F handled explosions and fireballs with impressive brightness, but the fine details appeared slightly less defined compared with the Sony Bravia 8M2. Samsung's processing also leans towards slightly saturated colours. These aspects of detail and accuracy are apparent in the facial features, fabric textures, and colours in the

console's power, with visuals appearing sharp and well-defined.

That experience is backed by a full gaming feature set. The S95F supports HDMI 2.1 with 4K at 120Hz, along with VRR, ALLM and FreeSync Premium Pro, which helps keep gameplay smooth and tear-free on both PS5 and Xbox. When connected to a PC, the panel can run up to 165Hz, a clear advantage for fast-paced shooters and racing titles. With 120Hz VRR enabled in Game Mode, input lag drops to around 5ms, placing the S95F among the most responsive large-screen TVs for gaming.

AUDIO

Audio is acceptable for general viewing. Dialogue is clear and front-facing, and casual content such as sitcoms

responsive gaming performance and stunning design. The matte anti-glare finish gives it a benefit in bright or mixed-light rooms, and the One Connect box keeps the setup slim and tidy in a way most OLED rivals cannot match. In everyday use, the TV delivers consistent HDR output, feature-rich Tizen UI, and the connected smart ecosystem benefits. You also get industry-leading software support, which helps the TV stay current for longer.

However, we are talking about the big leagues; there are a few limitations you should account for before you spend the big money. The matte coating can produce some artefacts in darker scenes, there is no Dolby Vision support, and the audio lacks the oomph some of its rivals have. And when compared against these rivals, Samsung trails behind the Sony Bravia 8M2 in fidelity, especially in dark-room detail, colours, and audio.

Despite the trade-offs, the S95F makes sense for many buyers. If your room gets light, you want a responsive gaming screen or opt for the cleaner setup with the One Connect box, the S95F's strengths make up for the price.

—G. S. Vasan

closing scenes of Knives Out. There was also mild black crush or a lack of details in certain dark sequences, like shadows.

In gaming, the S95F delivers a consistently strong experience. The panel is bright enough to enjoy titles like Ghost of Tsushima even during in-game night scenes, without losing visibility or impact. Graphics look clear and vibrant, making almost every game feel visually rich, while gameplay stays fluid and smooth with no noticeable frame drops. The large screen adds to the sense of immersion, pulling you into the world rather than making you feel like a distant observer. When paired with a PS5 Pro, the TV made full use of the

and news broadcasts sounds fine. In contrast, the Sony Bravia 8M2 offers stronger built-in sound with better low-frequency performance. The LG G5 sits somewhere in the middle: better than Samsung in bass and overall clarity, but not as rounded as Sony.

For better sound from the Samsung TV, you could connect a soundbar. The TV could benefit from the proprietary Q-Symphony feature, which syncs audio from the TV and a compatible soundbar or audio system for a better output.

VERDICT

The Samsung S95F's main strengths lie in its brightness, wide colour coverage,

SPECIFICATIONS

Display: 77-inch 4K QD-OLED (Quantum Dot OLED) | Refresh Rate: Native 120Hz (Up to 165Hz for PC gaming) | HDR Support: OLED HDR Pro, HDR10+, HDR10+ Gaming, HLG | Processor: NQ4 AI Gen3 (featuring 128 AI neural networks) | Output Power: 70W | Input Lag: ~9.5ms (Game Mode) | Gaming Hub: Integrated platform for Xbox Game Pass, NVIDIA GeForce Now, and Luna | Remote: SolarCell Remote (rechargeable via light or USB-C) | Connectivity: 4 x HDMI 2.1, 3 x USB-A, 1 x USB-C, Ethernet, Optical Digital Audio Out, Wi-Fi 5 & Bluetooth 5.3 | OS: Tizen OS (2025 version with One UI) | AI Vision: Includes Click-to-Search and Live Translate for subtitles | Smart Home: Built-in SmartThings Hub | Voice Assistants: Built-in Alexa and Bixby
