

3,963,689 is significantly higher than the OnePlus 15's 3,529,849. Geekbench single-core and multi-core scores of 3666 and 11,050 also edge out the OnePlus 15's 3609 and 10,680. Everyday usage reflects this tuning: applications open faster, animations feel more eager, and UI interactions sometimes feel half a beat ahead of your touch. PCMark Work scores also back this up, with Realme reaching 26,693 compared to OnePlus's 15,829. In other words, Realme feels consistently snappier and more energetic throughout the day.

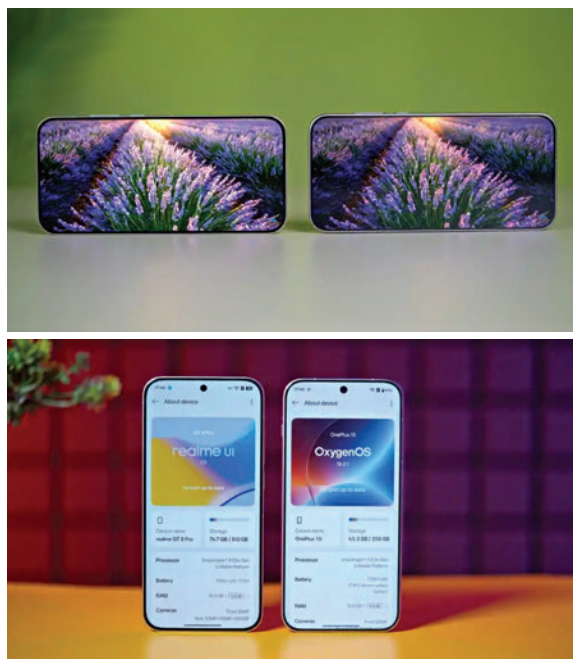

In GPU-intensive workloads, the situation reverses. The OnePlus 15 pulls ahead in the 3DMark Wild Life Extreme benchmark with a score of 7135 versus Realme's 5442. This translates to better frame pacing in graphically demanding titles and slightly better performance in emulation and video rendering. During the CPU throttle test, the OnePlus 15 stabilises at around 85% of peak performance, while the Realme GT 8 Pro drops to around 75% after sustained load. That slight difference becomes noticeable in longer tasks where thermal performance matters more than sheer speed.

The Snapdragon 8 Elite Gen 5 performance test on both phones reveals the same pattern: Realme hits harder initially, but OnePlus sustains performance for longer periods. The OnePlus 15 also benefits from its dedicated touch and Wi-Fi chips, which improve responsiveness and reduce latency.

Camera Comparison

This is where the Realme GT 8 Pro vs OnePlus 15 comparison takes its most philosophical turn.

The Realme GT 8 Pro's camera system is headlined by a 50 MP main sensor, a 200 MP periscope telephoto and a 50 MP ultrawide, which benefits from Realme's partnership with Ricoh. The colour science leans strongly toward

bold contrast, vivid colours and aggressive HDR. The daylight samples all show clear evidence of Realme boosting saturation and lifting shadows to create a dramatic look. The Ricoh partnership clearly influences the processing, giving photos an aesthetic that looks pre-edited and ready for Instagram.

The OnePlus 15's triple 50 MP setup, meanwhile, leans carefully toward accuracy. Colours look more natural, skies retain their original tones, and complex shades remain properly separated instead of merging together. In portraits, the difference becomes even more pronounced. Realme's processing adds a reddish tint to skin and smoothens textures, sometimes giving faces an overly beautified look. OnePlus retains natural pores, realistic golden undertones and a more professional separation between subject and background. The Realme GT 8 Pro Ricoh camera review notes this inconsistency, whereas the OnePlus 15 delivers predictability.

The Realme GT 8 Pro's 200MP telephoto brings exceptional clarity and a standout telephoto macro mode that captures textures in stunning detail. OnePlus counters with a more stable periscope at 3.5x optical zoom and

cleaner results at high zoom levels up to 30x.

Selfies are an easy win for OnePlus thanks to its auto-focus, larger sensor and more controlled HDR. Realme's front camera is sharp, but its tendency to brighten and smooth faces is noticeable.

The conclusion is simple: if you want dramatic, social-media-ready shots with a distinctive tone, Realme's camera system has more personality. If you care about accurate skin tones, dynamic range and better selfies, the OnePlus 15's camera system is more reliable.

Verdict

The Realme GT 8 Pro is the more expressive of the two. Its display is more accurate, its CPU scores are higher, its camera system, especially the Realme GT 8 Pro 200MP telephoto, has more personality, and its design feels refreshingly different. It's a flagship that wants to stand out.

The OnePlus 15 feels like the more mature option. Its battery life is longer, its gaming performance is more stable, its camera system is more natural and consistent, its display is brighter indoors, and its build quality feels more refined. It's a flagship that wants to last.

Both are excellent. Both justify their price. But the type of user you are will determine the better choice.

If your priorities lean toward colour-accurate displays, bold photography, raw CPU power and playful design, the Realme GT 8 Pro is the better flagship under ₹75,000.

If you care more about realistic photos, better battery efficiency, smoother long-term performance, refined software and class-leading durability, the OnePlus 15 should ideally be your pick. **d**
