

■ **LAPTOP LAUNCH**

Apple's new MacBook Pro launch tipped

Speculation around Apple's next MacBook launches is building as January 2026 draws to a close, with a Macworld report suggesting the company could unveil refreshed MacBook Pro models on January 28, the same day its new Creator Suite software goes live. The overlap has fuelled expectations that Apple may pair the launch of pro focused tools like Final Cut Pro and Logic Pro with

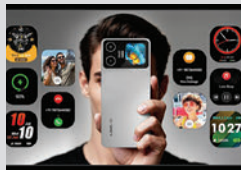

new hardware aimed at creators and power users. If accurate, the announcement could include updated 14 inch and 16 inch MacBook Pro models powered by the M5 Pro and M5 Max chips, focusing on performance gains rather than design changes. Apple

already began the M5 generation in October with the launch of the MacBook Pro featuring the standard M5 chip, which highlighted

major improvements in AI performance, graphics, and battery life. tinyurl.com/hbgy7e

Lava Blaze Duo 3 with dual screen launched in India

Lava has expanded its Blaze lineup in India with the launch of the Lava Blaze Duo 3, a mid range smartphone with a dual screen design. It features a 6.67 inch Full HD+ AMOLED display with a 120Hz refresh rate, along with a 1.6 inch AMOLED rear screen for notifications, music controls, and selfie previews. The phone comes with the MediaTek Dimensity 7060 chipset, paired with 6GB LPDDR5 RAM and 128GB UFS 3.1 storage. It packs a 5000mAh battery with 33W fast charging, a 50MP Sony IMX752 camera, and runs Android 15 with confirmed Android 16 and two years security updates. tinyurl.com/w71hsc

First RGB-stripe QD-OLED and OLED monitors announced

Asus and MSI have announced the first monitors using new RGB-stripe OLED and QD-OLED panels from Samsung Display and LG Display, aimed at fixing long standing text clarity issues on OLED monitors. MSI revealed two 34 inch QD-OLED models, while Asus announced two similar ultrawide displays plus the first 27 inch 4K RGB-stripe OLED monitor. These panels align pixels horizontally like LCDs, reducing colour fringing around text and making OLED more practical. Asus and MSI monitors could push OLED beyond gaming focused use cases once pricing and availability are confirmed. tinyurl.com/9wj1n1p

■ **SEAGATE DRIVES**

Seagate introduces 32TB drives for AI videos

Seagate has showcased its latest mass capacity storage solutions at Intersec 2026, positioning its portfolio to support the rapid rise of AI powered video analytics. Citing industry estimates, the company highlighted how video data volumes will surge as AI systems add meta-data, summaries, and annotations,

turning surveillance into actionable intelligence. To meet this demand,

Seagate announced new 32TB hard drives across its Exos, SkyHawk AI, and IronWolf Pro lines, built on CMR technology. The drives target edge, data centre, and NAS deployments, addressing storage bottlenecks in AI driven video workloads. Global rollout begins January 14, with prices starting at \$699.99. tinyurl.com/1ugsbqa1
