

UNIQUE GADGETS

HP EliteBoard G1a

At CES 2026, HP unveiled the HP EliteBoard G1a, a fully functional desktop computer housed entirely within a keyboard chassis. Powered by an AMD Ryzen AI processor, this minimalist device eliminates the need for a tower, offering a seamless plug-and-play experience via USB-C. Designed for hybrid work and shared spaces, it prioritizes efficiency and thermal management, providing a practical, sustainable alternative to traditional setups without compromising on connectivity or performance.

Lollipop Star

At CES 2026, Lava Tech Brands unveiled the Lollipop Star, a \$8.99 (approx. \$800) gadget that literally lets you taste the beat. This single-use lollipop utilizes bone conduction technology to transmit music through your teeth and jawbone directly into your inner ear. The “snackable” audio player features exclusive artist-flavor pairings, such as Ice Spice with Peach and Akon with Blueberry. While functionally ephemeral – the music stops when the battery dies or the candy dissolves – it stands out as a fun, chaotic novelty. Interested buyers must currently join a waitlist to experience this unique “sugar rush” for themselves.

Razer Project AVA

At CES 2026, Razer unveiled Project AVA, a holographic desk companion that effectively brings the “waifu in a bottle” concept to life. This cylindrical device projects a 5.5-inch interactive 3D avatar – powered by xAI’s Grok – that acts as both a gaming coach and life organizer. By connecting to your PC, AVA uses computer vision to analyze your gameplay or workflow in real-time, offering strategic advice or managing your calendar. With personas ranging from anime-style characters to esports legend Faker, it transforms the AI assistant from a disembodied voice into a tangible, reactive presence on your desk.

Lenovo ThinkBook Plus Gen 7 Auto Twist

Moving from concept to market-ready product, the ThinkBook

Plus Gen 7 Auto Twist reinvents the convertible laptop with a motorized dual-rotation hinge. This mechanism automatically rotates the 14-inch 2.8K OLED touchscreen between laptop, tablet, and sharing modes with a simple voice or software command.

Lenovo Legion Pro Rollable Concept

The Legion Pro Rollable Concept is a bold attempt to solve the “travel vs. tour-

namment” dilemma for esports pros. Starting as a standard 16-inch laptop, the screen expands horizontally, growing first to 21.5 inches and finally to a massive 24-inch “Arena Mode” aspect ratio. This allows gamers to carry a desktop-class monitor experience in a backpack.

TDM Neo headphones

The TDM Neo Hybrid is an over-ear headphone that can be twisted into

a portable Bluetooth speaker. The design activates different drivers depending on the mode, with two inward-facing 40mm drivers used for private listening and two outward-facing 40mm drivers taking over in speaker mode. It doesn’t have ANC. Other highlights include Bluetooth 6 with multipoint pairing and Auracast, and up to 200 hours playback.
