

BenQ EW3290U

A 32-inch 4K monitor to balance work and chill

₹40,998

I usually stick to my MacBook screen for everything. Work, learning, streaming, editing, all of it happens on that single 13.3-inch panel. I never really felt the need for a bigger screen. In fact, I worried a second display would break my tunnel-vision focus. I wasn't sure how my brain would handle splitting attention across two panels. But as part of my work, the laptop screen kept getting overloaded. Tabs, spreadsheets, slides, notes, drafts, video calls, Spotify and everything else were fighting for space. Then the BenQ EW3290U review unit arrived, and curiosity took over. I wanted to see whether a larger, 32-inch screen could actually fit into my routine without overwhelming it. A few weeks later, I had my answer. Yes, the EW3290U slightly changed how I work at my desk. I even took it home for a bit,

and it quietly turned into my evening entertainment screen

The BenQ EW3290U is a 32-inch 4K monitor priced around Rs 40,998.

Here's an account of how it actually performs in daily use across design, display quality, colour, HDR, gaming, audio and whether it deserves a spot on your desk.

DESIGN AND CONNECTIVITY

On the desk, the BenQ EW3290U doesn't try to look aggressive or flashy. But it is still a charmer with its clean white finish, big matte screen with slim bezels and a minimal stand. The stand is sturdy and, importantly, adjustable. You can raise it (up to 11cm), tilt it (-5° to 20°), swivel it (20°/20°), and pivot it (90°/90°) until it meets your viewing requirement. I used to just keep it lowered until it sits exactly at eye level next to my laptop. This could fix a lot of

neck strain. The monitor (with the base) weighs around 8 kgs, and so, it can be easily moved between desks, too.

The stand has a rectangular, open-frame base, where you can place items like a phone, dongles, miniature toys, idols, decor items, etc. And of course, the monitor's remote.

The cuboid remote is also white, and the grey buttons offer a subtle contrast. It is very handy and comes with dedicated buttons for volume control, play/pause, fast forward, rewind, picture mode, audio mode, input options, power and more. I didn't think I'd use the remote, but when leaning back to watch something after work, it feels obvious.

Below the screen, you can find buttons for powering on/off the monitor and accessing its key modes.

And behind it, there is a healthy list of IO options. A USB-C with up to 65W PD charging and DisplayPort Alt Mode for displaying my laptop's secondary screen. The desk instantly looks tidier, and disconnecting takes two seconds instead of pulling out multiple cables.

There is another USB-C 3.2 with 5 Gb/s data transfer and 7.5W power charging. Then there are three HDMI 2.0 ports for consoles and streaming sticks, three USB-3.2 Gen1 ports, 5 Gbps data transfer, 7.5W power charging, and a headphone out port.

DISPLAY

The 32-inch 4K IPS matte panel is the main reason to consider the BenQ EW3290U. For work, it's excellent. Text is sharp and legible, scaling feels natural, and if you are like me, your app windows finally have breathing room on this bigger screen. Lesser window Tetris!

The support for M-Book colour profile (in SDR) means it twins the colour profile of my MacBook Air just fine. Reflections are handled well. The matte finish diffuses glare, and I never felt distracted in normal day lighting. But, the viewing angles could have been better.

The panel's brightness was touching 430 nits in our test. BenQ also offers TUV-certified eye-care protection fea-
