

Logitech MX Master 4

Productivity beast with a price tag

On most workdays, my desk looks like controlled chaos. There are multiple Chrome windows open at once, a half-edited article waiting in the background, WhatsApp Web buzzing with messages, and at least one document that exists purely because I was afraid to forget an idea if I did not write it down immediately. Some days involve writing extensive features, others are packed with interviews and calls. Amidst all this, the one thing that I am constantly using is my mouse.

That is why a good mouse matters far more than people realise. When your workday involves endless scrolling, switching between devices, and clicking for hours at a stretch, even small inefficiencies add up. A mouse that does not feel right quickly becomes distracting, and one that works well almost disappears into the background. The Logitech MX Master 4 fits directly into this kind of workflow. It is clearly built for people who spend long hours at their desks and need a tool that can keep up without demanding attention.

After using the insanely powerful mouse as part of my everyday setup for a week, it feels less like a product designed to impress at first glance and more like one meant to be lived with. It is familiar, deliberate, and aimed for workdays that are anything but simple.

DESIGN AND BUILD

At first glance, the MX Master 4 looks instantly recognisable as a productivity-focused mouse. The sculpted right-handed shape, tall palm support, and angled thumb rest make it clear that this is designed for long work sessions rather than quick, casual desk use. Logitech

itech has not tried to slim it down or chase flashy aesthetics, and that restraint works in its favour. Comfort remains the priority here.

What stands out is the material choice. Logitech has opted for a silicone-based surface that feels tough and well-finished, giving the mouse a more durable and premium feel in hand. This is especially noticeable around high-contact areas like the thumb rest and side panel, which are built to handle daily use without feeling delicate. The surface strikes a good balance between softness and structure, making the mouse comfortable to hold for extended periods.

Grip is excellent throughout. Despite its smooth appearance, the mouse never feels slippery during use. If anything, it feels planted and controlled, particularly during precise movements. The side panel also does a good job of

resisting fingerprints and smudges, which sounds minor but makes a real difference when you are using a mouse for eight to ten hours a day.

The weight, however, is impossible to ignore. This is a heavy mouse, and very much by design. That added weight contributes to stability and control during productivity tasks, but it also makes it clear that this is not meant for gaming or fast-paced movements. Quick flicks and rapid directional changes are not its strength, and Logitech is clearly prioritising control and comfort over agility.

BUTTONS AND WHEELS

The button layout feels intuitive and well thought out. Left and right clicks are quiet and soft, making them ideal for shared workspaces. The main scroll wheel remains the star of the experience. Logitech's MagSpeed scroll wheel effortlessly switches between precise line-by-line scrolling and free-spinning infinite scroll.

For anyone who regularly works with long documents, large spreadsheets, or endless web pages, infinite scroll is something that will come in handy very often. It turns what is usually a slow, repetitive action into something fluid, effortless, and honestly, fun. When precision is needed, the standard scroll mode feels just as refined, with consistent resistance and accurate control.

The horizontal thumb wheel adds another layer of usability. Once you get used to scrolling sideways through timelines, wide documents, or large canvases, it is difficult to go back to a mouse without it. Video editors and audio professionals, in particular, will appreciate how it fits into their workflow.
