

Logitech has also included an extra programmable thumb button along with a button for the Actions Ring. These additions do not overcrowd the mouse. Instead, they expand its flexibility for users who enjoy customising their setup without making the layout feel intimidating. Let's talk more about the Actions Ring in the next section.

ACTIONS RING AND HAPTICS

The reason that the MX Master 4 stands out when compared to its last generation is haptic feedback, paired with the new Actions Ring. This is where Logitech has taken a more experimental step, but one that largely pays off.

The haptics are subtle and controlled rather than flashy. You feel gentle feedback with certain actions, switching devices, or interacting with the Actions Ring. There are multiple intensity levels, and you can turn it off entirely if you prefer a more traditional feel. At higher settings, the feedback adds a sense of intention to interactions, making the mouse feel more responsive rather than noisier or distracting.

Now, let's talk about the feature I loved the most- Actions Ring. It is essentially a contextual shortcut system that lives under your thumb. Pressing the ring button brings up a customisable overlay of actions, either system-wide or app-specific. You can

easily assign various shortcuts to this overlay via the Logitech Options+ app. The Actions Ring reduces reliance on keyboard shortcuts by putting frequently used commands within easy reach. And as someone who turns her screen brightness down, changes volume, and takes multiple screenshots while working among other things, the Actions Ring is incredibly useful. Since this is a new feature, many people might take their time getting used to it and that's fine. Because once you make this a habit, your productivity will go up.

How useful this feels also depends on your workflow. For video editing, design work, and multitasking-heavy use, it can genuinely speed things up once you invest time in setting it up. For lighter workloads, it may end up being used less frequently. The key thing is that it feels optional rather than forced. Logitech gives you the tools, but does not insist you change how you work.

MULTI-DEVICE CONNECTIVITY

Connectivity is another area where the MX Master 4 excels. Bluetooth pairing is fast and painless, and switching between devices is as simple as pressing a button. Moving from a laptop to a tablet to a desktop takes seconds, and the mouse never felt confused about where it was supposed to be. The mouse supports up to three devices,

which has become essential. Modern desks are rarely single-device setups anymore, and the MX Master 4 fits neatly into that reality.

Logitech also includes a Logi Bolt USB-C dongle, which brings both advantages and compromises. On the plus side, USB-C allows easier compatibility with modern laptops, tablets, and even phones. On the downside, many laptops still have limited USB-C ports, and plenty of desktops prioritise USB Type-A. Using a Type-C dongle may require an adapter in some setups, which slightly undermines the plug-and-play appeal.

SHOULD YOU BUY?

The MX Master 4 makes its users very clear. This is not a mouse for competitive gaming, lightweight portability, or minimal desks. With a price tag of Rs 15,995, this is built for people who spend long hours working and want the ultimate premium experience.

Its weight, shape, and features all point towards productivity. Casual gaming is possible, but not the focus. So, if your work involves repetition, precision, and constant context switching, this mouse earns its place quickly.

So, if productivity is something you take seriously, the MX Master 4 quietly makes a strong case for itself.
