

Haier M92 QD- Mini LED TV

Promising features with mixed execution

₹1,05,990

Haier is a name most Indian buyers associate

first with ACs, refrigerators, washing machines and other home appliances. That said, the company also manufactures smart TVs, and we received the Haier M92, a 65-inch QD-Mini LED smart TV, for review. It is priced at Rs 1,05,990 and packs interesting features, including Dolby Vision IQ, Google TV OS, and KEF-tuned sound with Dolby Atmos support. It also brings AI enhancements for visuals, audio, gaming and regular performance. I used it for the better part of a month, and during this course, I tested all these different aspects. So, what began with a mix of curiosity and healthy scepticism, let's see how it ended up.

BIG MINI LED AMBITIONS, BUT...

The Haier M92 is available in 65-inch and 75-inch sizes. We tested the 65-inch model with a 4K QD-Mini LED panel. Compared to a 55-inch Sony TV placed

beside it, the Haier looks bigger and more cinematic. Viewing angles are fine as long as you don't sit too off-angle. Then, you will notice a drop in brightness and saturation. Also, sharpness isn't quite at the level you expect from a 4K panel, and finer details sometimes feel softened. This was apparent while watching regular content like YouTube, sports content, and everything else.

Colours look pleasant, but HDR performance doesn't always deliver the punch or precision you hope for. Considering the TV supports Dolby Vision IQ and HDR10+, I was left wanting more.

In Calman testing, the TV hit 99.7% BT.709 coverage in SDR and 95.42% UHDA-P3 in HDR. The average DeltaE was higher than ideal. So, colour support is strong, but tuning needs work to present those colours more accurately.

Haier claims an ambitious 1,000,000:1 contrast ratio, supported by 448 local dimming zones. In our measurements, the IPS panel reached

close to 900 nits brightness with an effective contrast of around 18,000:1. That is respectable, but not standout for Mini LED tech.

With local dimming disabled, whites look hazy, and blacks look washed out and appear more grey. In the submarine scene from Mission Impossible: The Final Reckoning, the vessel and Tom Cruise lack clarity compared to a competing Mini LED panel from Sony. There is visible banding and not enough detail in darker scenes, something that also shows up during night sequences in The Revenant.

The panel shows Dirty Screen Effect (DSE) too. These look like faint, uneven patches on grey backgrounds and are noticeable on the YouTube UI. Some visual issues can be tuned using the built-in picture sliders and AI controls. But DSE is a hardware trait and may be specific to this unit, which still raises questions about quality control.

Even in gaming, it packs the sought-after specs like 144Hz native refresh rate, VRR (variable refresh rate), ALLM (Auto Low Latency Mode), and AMD Freesync Premium, and you can expect a reasonable experience.

SMOOTH UI, SMART REMOTE & STRONG SOUND

Google TV on the Haier M92 feels familiar and easy to use. Navigation between Netflix, Prime Video, YouTube and live channels is smooth. Animations are responsive, and Google Assistant handles hands-free voice searches without much delay. Thanks to 4 GB RAM and 64 GB ROM under the hood.

The bundled remote is very handy and has hotkeys for settings, input options, Google Assistant, OTT apps like Netflix, Prime Video, YouTube, etc.

The UI is polished well, but one dialogue box showed 'Paring' instead of 'Pairing', which looked weird.

As for sound, the 50W speaker output is a pleasant surprise. It is a 2.1-channel with Dolby Atmos, tuned by KEF, that offers clear dialogue, notable bass and a spacious presentation.
