

DESIGN AND IO

The Haier M92 has a clean, minimalist front with slim bezels that keep focus on the picture, subtle Haier branding and a KEF badge on the right corner. The build quality feels solid with a thick chassis, neat geometric finish on the back, and plastic holders to neatly channel the cables. Beneath the Haier logo, there is a physical mic mute switch for enhanced privacy.

Connectivity covers most needs. You get four HDMI ports with HDMI 2.1 bandwidth, USB-A ports (including one placed on the left edge), Ethernet, headphone out, Bluetooth and Wi-Fi. Wireless pairing and casting work smoothly.

SHOULD YOU BUY THE HAIER M92 TV?

The Haier M92 makes a strong first impression on paper. You get a large QD-Mini LED panel, Dolby Vision IQ, Google TV, 144 Hz support, HDMI 2.1 features, KEF-tuned speakers with Dolby Atmos and a tidy design that looks premium in the living room. Day-to-day use is smooth, the interface loads quickly, voice control works well, and the remote adds thoughtful touches like solar charging.

But living with it also shows the gaps. The panel does not always deliver the sharpness and HDR punch you expect at this price. Off-angle viewing takes a hit, blacks can look grey, and dark scenes lose detail. Measurements

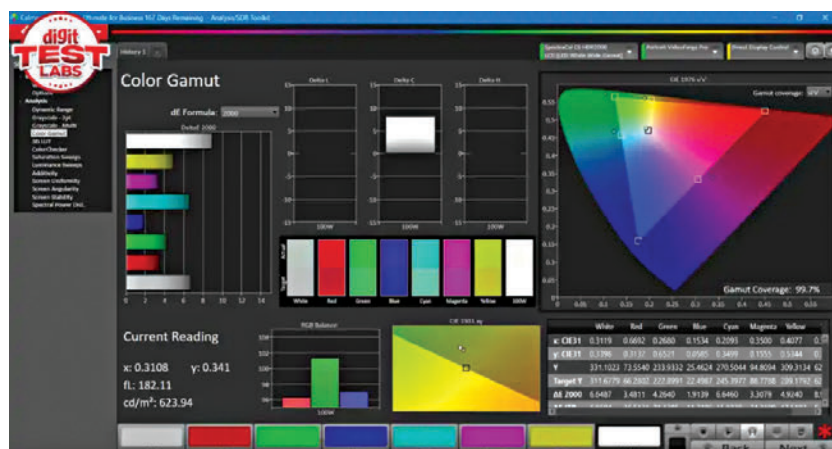

show decent brightness and coverage, yet colour accuracy isn't tuned as tightly as rivals. Gaming support looks impressive on the spec sheet, but the real experience sits more in the 'fine' category than impressive.

So, should you buy it? If picture quality is top priority, there are com-

peting Mini LED models that will satisfy you more. If, however, you just want a large screen for your living room with strong features, sound, performance and a generally pleasant viewing experience without stretching into top-tier pricing, the Haier M92 could make sense.

—G. S. Vasan
