

Oppo Enco Buds 3 Pro+

The right ANC earbuds for everyday use?

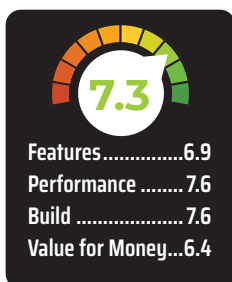

While researching for the top TWS earphones under Rs 3,000, I was genuinely surprised by how many good options exist in this segment. Of course, the competition is intense, and stepping into this crowded space, Oppo launched the Enco Buds 3 Pro+ at Rs 2,099 (now priced at Rs 2,499), with features like 12.4mm Dynamic Driver, Bluetooth 5.4, IP55 ingress resistance, and 32dB Active Noise Cancellation (ANC). The company already has the Enco Buds 3 Pro listed at Rs 1,799 in the same price bracket, but that model skips out on ANC. Naturally, I wanted to see whether ANC actually makes a meaningful difference in everyday use and, more importantly, whether it actually makes sense to spend extra on the new buds.

After several weeks of using the Oppo Enco Buds 3 Pro+ for workout playlists, background work music, calls, commute podcasts, and evening wind-down music, I think I finally have a clear answer. So here's my experience with the buds.

The Oppo Enco Buds 3 Pro+ can be a sensible everyday TWS purchase under Rs 3,000, for they provide a balanced offering, rather than standout features. You get a familiar and comfortable design, reliable battery life and connectivity, and a bass-forward and enjoyable sound. ANC is the main addition and works well indoors, making them more complete than the Enco Buds 3 Pro. If noise cancellation matters, they make sense. If not, the cheaper Pro still offers better value.

COMFORTABLE AND FUNCTIONAL DESIGN

We received the dark blue variant of the Oppo Enco Buds 3 Pro+. A black colour

option is also available, which I would have personally preferred. Regardless of the colour you choose, the earbuds themselves match the case. The build is entirely plastic, paired with silicone eartips, and the buds feel light and unobtrusive even during

long listening sessions

The charging case is compact enough to slip easily into a jeans pocket. Since I often toss it into my laptop bag or pockets alongside other items, some of them sharp, the case has held up well, with no noticeable scratches so far. The matte finish clearly helps here.

From a durability point of view, the IP55 rating is another reassuring touch. It offers some peace of mind if you end up wearing the buds in light rain or during sweaty outdoor workouts.

Beyond their lightweight and sturdy build, the in-ear design is comfortable and also does a good job of creating a decent passive seal.

One notable omission, however, is wear detection, a feature that the One-

Plus Buds 3 Pro, priced at Rs 2,599, does not skip out on.

STRAIGHTFORWARD SETUP AND CONNECTIVITY

The initial pairing begins as soon as you open the case for the first time. Thanks to Google Fast Pair, a pop-up appears on nearby Android devices, and all you need to do is tap it to connect.

For manual pairing later on, place both earbuds back into the charging case, open the lid, press and hold the function button for two seconds until the white indicator light starts flashing.

The earbuds use Bluetooth 5.4, which remained stable throughout my testing. There is also support for dual-device connection, making it easy to switch between my OnePlus 13 and laptop during daily work and media use.

Codec support is limited to AAC and SBC. While AAC worked well in my usage, Oppo could have included more advanced options, especially considering that the more affordable Realme Buds T200 offers LDAC support.

BASS-FORWARD & FUN AUDIO

Based on our in-house frequency tests, the Enco Buds 3 Pro+ has a bass-dominant sound signature, with recessed lower mids, a boosted upper-mid or presence region, and a relaxed treble.

Across my usual test tracks, the bass impact felt thick rather than tight, but still acceptable for the price. In songs like Dream Theatre's Pull Me Under and Between the Buried and Me's Selkies, dense sections can sound a bit mushed together, while in Hunter by Björk, some background details fail to stand out clearly. On the other hand, tracks like Kings of Leon's Around the World sound energetic, and Fall Out Boy's Centuries remains easy to listen to.

Put simply, these earphones sound enjoyable, but not particularly precise, though that's not something we're really expecting at this price point.

This tuning works well for pop and EDM, and it's perfectly fine for podcasts, softer indie and acoustic playlists, and
