

everyday media consumption. If you plan to use them for gaming, it's worth noting that they support low latency of up to 47ms.

ANC AND CUSTOMISATION

Call quality is clear and legible, thanks to the dual-mic setup and AI-powered noise reduction. The in-ear passive seal also plays a part here.

Passive isolation, combined with up to 32dB ANC, does a decent job of cutting down everyday indoor noise. Outdoors, however, especially in heavy traffic or crowded areas, the ANC struggles to deal with sharper sounds such as vehicle noise and horns. In this price range, rivals like the Realme T310, CMF Buds 2a, and Boat Airdopes Prime 701 claim stronger ANC performance.

If you need to stay aware of your surroundings, there is a Transparency mode that lets external sounds pass through. It is not particularly natural, but it's fine as a basic feature.

The Enco Buds 3 Pro+ offers more than just noise modes. Using the HeyMelody app, you can quickly toggle between ANC, Transparency mode, or turn noise handling off directly from the home screen. The app also lets you switch between Original Sound, Bass Boost, and Clear Vocals via the Enco Master EQ. There is a usable spatial audio effect through Oppo Alive Audio on select phones, along with options to locate lost or misplaced earbuds and customise the touch controls.

You can map different actions to single tap, double tap, triple tap, touch and hold, and long touch and hold on both the left and right earbuds. That said, the touch controls do not always register unless you tap or hold the exact spot. The plasticky surface does not feel reassuring to touch, but this never becomes an experience-breaking issue.

RELIABLE BATTERY LIFE

Battery endurance is a strong point here. Each earbud houses a 58mAh battery, with an additional 440mAh battery inside the charging case. In our continuous playback test at 80% volume, with ANC switched on and using the AAC codec, the earbuds delivered around eight hours of playback on a single charge. That is enough to comfortably get through a full working day.

The charging case provides additional top-ups, which should easily cover a weekend trip. According to Oppo's lab tests, the case can deliver up to 43 hours of total playback with ANC turned off and volume set at 50%.

Fast charging is also supported. Oppo claims that just 10 minutes of charging can deliver up to four hours of AAC music playback at 50% volume with ANC off. A full charge for both the earbuds and the case, from 0 to 100%, takes roughly 1 hour and 30 minutes.

VERDICT

Oppo's Enco series has built a solid reputation for delivering strong value, and

the Enco Buds 3 Pro+ feels like a carefully positioned product aimed at a specific kind of buyer. The biggest upgrade over the Enco Buds 3 Pro is active noise cancellation, and in everyday use, it does make a noticeable difference indoors. If you spend long hours working inside, take frequent calls, or listen to podcasts and music in relatively controlled environments, the combination of a decent passive seal and 32dB ANC helps cut down everyday distractions.

That said, this is not a dramatic upgrade across the board. The overall design, comfort, connectivity, and core sound character remain familiar and functional. The tuning is still bass-forward and should sound fun to most listeners. Battery life is strong, comfort remains excellent for long sessions, and connectivity is stable with useful dual-device support.

Against other options under Rs 3,000, the Enco Buds 3 Pro+ competes more on balance than on standout features. Yes, there are competitors from Realme and Boat that promise stronger ANC or offer advanced codecs like LDAC, but the real-world difference may not be night and day. The Oppo Enco Buds 3 Pro+ makes sense if you want a comfortable pair of earbuds with ANC, reliable battery, and an enjoyable sound. They may not be the most exciting option in the segment, but they are dependable. If ANC is not a priority, the Enco Buds 3 Pro are worth considering.
