

Groklopedia is going to space

You can as well, here's how

Vyom Ramani | editor@digit.in

Immortality used to require building a pyramid or conquering an empire. In 2026, all it requires a verified X account and a suggestion box. Elon Musk's xAI has teased the ultimate backup plan for humanity: taking Groklopedia – the AI-powered Wikipedia dupe by xAI – and evolving it into the Encyclopedia Galactica. The end goal is straight out of science fiction: etching human knowledge onto indestructible crystals and launching them to the Moon, Mars, and beyond.

The most intriguing development is that the history books are now open to edits. Users can influence the record that might one day be read by alien archaeologists.

Road to immortality

Unlike Wikipedia's complex bureaucracy of editors, Groklopedia relies on a mix of AI verification and user-driven suggestions. While wide-

spread "public etching" is queued for future cycles, the digital foundation is being laid right now.

Step 1: 'Suggest an Article'

As seen in early user access, the process begins on the Groklopedia interface. A modal labeled "Suggest an Article" allows users to input a topic – such as their own name.

- **What to do:** You aren't just pasting a resume. You are asked to provide "Additional Details," explaining specific aspects of the life or topic you want covered.
- **The Pro Tip:** The tool prompts users to be specific. Instead of "I am a writer," details like "Author of [book title], published in 2024, focusing on [book topic]."

Step 2: 'Highlight and Correct'

This is where Groklopedia differs from static archives. It uses a "truth-seeking" loop. If an entry already exists, users can highlight errors

and suggest corrections. Early tests have shown Grok processing massive amounts of context in one instance, a 10,000-word career biography was verified and auto-corrected based on user input and cross-referencing.

To prevent vandalism, access requires a verified X account. This ties your suggestions to your real-time digital footprint, allowing Grok to verify your claims against your public history.

Step 3: 'YourGroklopedia'

While the "Galactic" upload is the long-term goal, the immediate feature is YourGroklopedia. This allows the AI to learn your specific context and preferences, creating a personalized knowledge base that serves as the raw data for your eventual "Encyclopedia Galactica" entry.

'Superman crystals'

This isn't a cloud backup that vanishes if a server farm loses power. xAI is utilizing 5D optical data storage, referred to as "Superman memory crystals."

Developed by researchers at the University of Southampton, these nanostructured glass discs are virtually indestructible. They can withstand temperatures of 1,000°C, direct cosmic radiation, and immense pressure.

The plan is to distribute these crystals across three locations:

1. Low Earth Orbit
2. The Moon (buried in regolith)
3. Mars (a library for colonies)

By allowing users to suggest their own articles and correct the record, xAI is essentially crowdsourcing the history of the 21st century.

Your biography will be a permanent artifact in space, waiting for a reader in a galaxy far, far away. **d**
