CPU throttling tests, the phone maintains around 86% of its peak performance, which is an excellent and stable sustained output without aggressive thermal drop-offs.

But benchmark results place the Reno 15 in familiar territory. It scores 1,239 in Geekbench 6's single-core test and 4,053 in the multi-core run, while Antutu returns a combined score of 1,460,237. In GPU-focused workloads, it records 2,096 in 3D Mark Wildlife Extreme and 10,731 in the Work 3.0 test.

While these numbers are fine, I expected better. The same Snapdragon 7 Gen 4 chip is already found in devices such as the Vivo V60, Realme 16 Pro Plus and even the previous-gen Reno 14.

That familiarity cuts both ways. On one hand, performance is dependable and well-understood, with no major surprises or weaknesses in day-to-day use. On the other hand, the lack of a meaningful chipset upgrade feels conservative, especially when competitors in a similar price bracket, such as the OnePlus 15R, offer flagship-class silicon like the Snapdragon 8 Gen 5.

BATTERY AND CHARGING

The Oppo Reno 15 is backed by a sizable 6,500mAh battery, a capacity that immediately places it ahead of many phones in its segment. Oppo pairs this with fast 80W wired charging.

On the PCMark Battery Life test, the Reno 15 lasted 21 hours and 30 minutes, which comfortably puts it in the territory of a day and a half of use for most people. During regular usage, mixing photography, social media scrolling, light image editing, gaming and navigation, the phone rarely induced battery anxiety. Even with moderate to slightly heavy use, it's realistic to end the day with plenty of charge left.

Charging performance is equally consistent. In our testing, the Reno 15 went from 0 to 100% in about 75 minutes using a compatible fast charger. That said, there are a couple of omissions worth noting.

VERDICT

The Oppo Reno 15 is a phone that makes sense the longer you live with it, even if it doesn't try to win you over instantly. It sits in a crowded sub Rs 40,000 segment where differentiation is difficult, and Oppo's approach this year is less about chasing extremes and more about delivering a balanced, dependable experience.

Its strongest pillars are clearly the display and the camera. The AMOLED panel is among the best-tuned screens in its class, prioritising colour accuracy and consistency over exaggerated punch. It's the kind of display that works equally well for streaming, casual photo editing and everyday use, without drawing attention to itself for the wrong reasons. The camera follows a similar philosophy. Instead of dramatic processing, the Reno 15 focuses on predictability, natural colours and stable results across conditions.

Performance is where the Reno 15 feels the most conservative. The Snapdragon 7 Gen 4 is competent and reliable, but familiar. It handles daily tasks and gaming without complaint, yet it doesn't move the needle forward in a segment where rivals are beginning to offer flagship-grade silicon.

Ultimately, the Oppo Reno 15 isn't trying to be the most powerful or the most experimental phone in its class. It's aimed at users who value a good camera, a well-calibrated display, strong battery life, and a design that feels premium without being flashy. If those priorities align with yours, the Reno 15 makes a solid case for itself.

–Ashish Singh

SPECIFICATIONS

Processor: Snapdragon 7 Gen 4 | GPU: Adreno 722@1150MHz | Display: 6.59-inch FHD+ AMOLED panel | Refresh Rate: 120 Hz | RAM: 8/12 GB | Memory: 256/512 GB | Camera (Rear): 50MP + 50MP + 8MP | Camera (Front): 50MP | Battery: 6500 mAh | Charging: 80W Wired
