

While the Lumio Vision 9 wins on colour accuracy and brightness benchmarks, the U7Q handles a wider range of HDR formats and also offers a fuller gaming feature set, including higher refresh rate support, VRR, ALLM, and better console compatibility. These shape how responsive and smooth the TV feels during actual gameplay.

As for gaming, U7Q has a strong feature set. With HDMI 2.1 support, high refresh rate, VRR, AMD FreeSync Premium and ALLM, the TV handles modern consoles and PCs confidently. Input lag is low. Fast-paced shooters feel responsive, and racing games like Gran Turismo Sport benefit from smooth motion and consistent frame pacing. Colours in HDR gaming feel limited, though.

The TV supports popular console features and switches into game mode automatically when a compatible device is detected. For casual and even moderately competitive gamers, the U7Q offers excellent value in this price range.

DESIGN

The Hisense U7Q has a clean, understated design. The bezels are slim, and the panel looks modern without trying to stand out. The central stand design provides good stability and leaves enough clearance for a soundbar. Build quality is solid for the price, with no obvious flex during installation.

Port placement is mostly rear-facing with some side access, making wall mounting manageable. Cable management is basic but functional.

The remote is very long. The grey colour, brushed metal finish, and disc-like navigation ring in the middle give it a distinct look, but some may find it gaudy. It is battery-powered and has no charging option.

VERDICT

At its current price of Rs 69,999, the 65-inch Hisense U7Q makes more sense today than it did at launch. It does not lead the segment in raw brightness, colour accuracy, or cinematic depth. Models like the Lumio Vision 9 offer

better benchmark numbers, but TVs are not judged only by lab charts.

The U7Q's strength lies in how complete the package feels at this price. It supports every major HDR format, including Dolby Vision IQ and HDR10+ Adaptive, offers a 144Hz panel with VRR and AMD FreeSync Premium, and includes four HDMI 2.1 ports. Gaming performance is impressive, and the feature set is future-ready in a way many rivals are not. In everyday viewing, the picture may not dazzle, but it remains stable, comfortable, and easy to watch over long sessions.

Audio performance is also better than most TVs in this range, thanks to the 47W 2.1-channel setup tuned by Devialet. You may still want a soundbar for cinematic impact, but you are not forced into it. Vidaa OS is smooth and functional, even if app availability is not as broad as Google TV.

So, yes, for the price you pay, there are some tradeoffs like limited app availability on Vidaa OS, a long and dated-looking remote, ghosting in sports content, average upscaling, and weaker details and HDR punch. If you want the brightest, sharpest, most cinematic image, look elsewhere. But if your budget caps at Rs 70,000 and you value gaming, HDR format compatibility, and respectable visuals, you can consider the Hisense U7Q. It offers a balanced mix of performance and features.

—G. S. Vasani

SPECIFICATIONS

Panel: 4K 8-bit+ FRC panel | Screen: 55/65/75/85/100 inch | Brightness: 620 nits | Refresh Rate: 144Hz | Connectivity: Wi-Fi, Bluetooth 5.3, 4x HDMI | Speakers: Main: 2x12W | Woofer: 25W | Colour: Quantum Dot | Input Lag: 5ms
