

Zero compromise on gaming, streaming, scrolling

MEET THE SMOOTHEST K-SERIES PHONES YET

With the OPPO K14x 5G and the OPPO K13 Turbo Series 5G, OPPO is delivering the same core promise across segments: smooth performance without compromise. The difference is simple — the K14x focuses on delivering reliable smoothness under ₹15,000, while the K13 Turbo Series pushes overall performance in the mid-range category.

This is not about specs alone. It's about how the phone feels in your hand, every single day.

Smooth where it matters: scrolling, streaming, switching apps

Smoothness is what users notice first. When you unlock your phone, open Instagram, switch to YouTube, reply on WhatsApp, and jump into a game — everything should feel fluid.

Both the K14x 5G and the K13 Turbo Series feature a 120Hz display. But refresh rate alone does not define smoothness. What makes the real difference is optimisation. OPPO's software tuning ensures touch response is accurate, animations are consistent, and background apps don't slow things down.

On the K14x 5G, this translates into dependable everyday smoothness — ideal for students, first-time 5G users, and multitaskers who want a value-for-money device that does not feel slow after a few months.

On the K13 Turbo Series, the experience goes further. With stronger overall performance tuning, it ensures high frame stability not just in casual use, but also during

demanding tasks like competitive gaming and HD streaming.

Performance built for real gaming

Gaming is the ultimate test of smoothness. The K14x 5G focuses on stable performance under ₹15,000. Whether you are playing BGMI, Call of Duty Mobile, or Free Fire, the device maintains consistent gameplay for casual to moderate sessions. It is built for users who want reliable gaming without overheating or sudden frame drops.

The K13 Turbo Series, positioned in the mid-range, is designed for those who want more. Higher performance tuning, better sustained frame rates, and enhanced cooling make it ideal for longer gaming sessions. The advanced cooling system — including active cooling support in the Turbo models — helps maintain performance even during extended play.

The result? Less throttling, fewer distractions, and gameplay that feels stable instead of unpredictable.

A battery that will last you the entire day and super quick charging

OPPO is one of those smartphone makers that helped push the trend of large batteries in mainstream smartphones, and it continues that legacy with the OPPO K14x 5G and the OPPO K13 Turbo Series 5G. Both devices pack massive batteries that stay ahead of typical expectations in their respective segments.

Of course, a large battery alone is not enough. Slow charging can quickly become a bottleneck. OPPO

addresses this with fast SUPERVOOC charging support inside the box for both smartphones. This ensures that you are not stuck near a wall socket for long periods of time. A quick top-up is easily enough to get you back into your game, your show, or your daily routine.

Because real smooth performance is not just about speed — it is about lasting power without interruptions.

Ergonomics built for real life

Usually, when we talk about phones with large batteries, there is one common concern — bulk. Many devices in the segment struggle to balance power and ergonomics well. However, with the OPPO K14x 5G and the OPPO K13 Turbo Series 5G, OPPO manages to strike that balance very impressively. Despite housing massive batteries and performance-focused hardware, both devices come in really slim, well-designed packages that also feel fully practical to use on the daily.

Additionally, both devices feature curved edges that enhance grip, because smooth performance is also about how the device feels in your hand over time. ■
