

CODE TO CHIPS

How Cadence's **Alok Jain** sees India rising

Jayesh Shinde | editor@digit.in

Government incentives and fab announcements may dominate headlines, but the real momentum in India's semiconductor journey's being forged quietly inside design labs, EDA toolchains and university ecosystems.

To understand what is actually happening on the ground, I caught up with Alok Jain, Corporate Vice President, Research & Development, Cadence, whose vantage point sits at the intersection of chip design, AI-led engineering, and India's evolving semiconductor workforce right now.

Cadence, after all, occupies a unique position in the global semiconductor value chain. While fabs and foundries grab attention, companies like Cadence build the computational software that makes modern chip design possible in the first place. From verification tools used by NVIDIA and Qualcomm to AI-driven design automation, Cadence's platforms are foundational to nearly every advanced chip being built today. With one of its largest global engineering bases in India, the company offers a revealing lens into how India is contributing not just to design services,

ALOK JAIN
Corporate Vice
President, Research
& Development,
Cadence
