

In benchmark tests, the Motorola Signature delivers strong results. It scored 31,01,691 on AnTuTu, which is clearly higher than other phones in the same price range. For comparison, the Samsung Galaxy S25 FE scored 19,02,139. It even managed to beat the OnePlus 15R, which scored 28,92,035 despite using the same processor. On Geekbench, the phone scored 2,892 in the single-core test and 9,498 in the multi-core test, once again staying ahead of the Galaxy S25 FE.

In real-world use, the phone feels fast and smooth. Everyday tasks like messaging, scrolling through Instagram, watching YouTube videos, or switching between apps worked without any lag. Casual games run easily, and even heavier games perform well. During testing, BGMI ran smoothly on high graphics settings, averaging around 118 FPS and even touching 120 FPS, which is impressive.

On the software side, the Signature runs Hello UI based on Android 16. The interface is clean and really easy

to understand, with no unnecessary clutter. Motorola has also promised seven years of Android updates and seven years of security updates, which adds long-term value. Overall, the Motorola Signature offers reliable and consistent performance.

CAMERA

Now, let's come to the cameras. The Motorola Signature features a triple rear camera setup, led by a 50MP Sony LYTIA 828 primary sensor with OIS. This is paired with a 50MP ultra-wide camera and a 50MP Sony LYTIA 600 periscope telephoto lens, offering 3x optical zoom and up to 100x digital zoom. On the front, there's a 50MP Sony LYTIA 500 camera you can use for selfies and video calls.

In bright daylight, the 50MP main camera captures sharp and detailed images with pleasing colours. The dynamic range is handled well, maintaining a good balance between highlights and shadows. There is a slight push towards higher contrast, but

it doesn't feel excessive; in fact, it gives photos a punchy, social-media-ready look without going overboard.

Portrait shots turned out well overall, with really good subject separation and natural-looking background blur. That said, edge detection isn't always spot on, especially around hair and finer details. Low-light performance is one of the stronger areas of this camera setup. Images look bright and fairly clean, with controlled noise levels and good sharpness. Details hold up really well, and the camera manages to keep colours natural. Overall, the Motorola Signature delivers a very reliable camera experience that works well across various different lighting conditions.

VERDICT

The Motorola Signature is designed for users who want a sleek, reliable, and well-rounded flagship that feels premium in the hand. Its slim, lightweight design, vibrant display, and strong performance make it ideal for everyday use, media streaming and gaming. The cameras deliver good results, while the battery easily lasts over a day and supports fast charging for quick top-ups.

It may not offer the most colour-accurate display or the absolute best camera performance, but if you're looking for a balanced, practical, and polished smartphone, the Motorola Signature is worth considering.
