

MOTOROLA SIGNATURE VS OPPO FIND X9

Which flagship makes more sense in 2026?

Siddharth Malhotra | editor@digit.in

If you look at any ₹60,000 to ₹70,000 flagship in 2026, most of them look good on paper. Big AMOLED screens, top-end processors, fast charging, and capable cameras are now a given. That's why buying a phone in this segment has quietly become harder, not easier. The real difference doesn't show up in spec sheets or launch-day excitement. It shows up after a few months, when the novelty fades, and the phone has to live with you every day. Things like software behaviour, battery consistency, camera

reliability, and simple comfort start to matter more than raw numbers. That's exactly where the Motorola Signature and Oppo Find X9 begin to feel very different. One is clearly built around long-term ease and balance. The other focuses on refinement, endurance, and tuning. On paper, they don't look that far apart. In daily use, the priorities become much clearer.

Display experience

Both phones have excellent displays, but they are tuned for different tastes. The Motorola Signature uses a large

6.8-inch LTPO quad-curved AMOLED panel with 1.5K resolution and up to a 165Hz refresh rate. It feels very smooth in everyday use. Scrolling is effortless, animations are fluid, and gaming feels responsive. As per our Digit Test Labs, peak brightness reaches around 2,450 nits, which is more than enough outdoors. Colours look vibrant, though there is a slight push towards cooler tones. It's a punchy display that looks impressive at first glance.

The Oppo Find X9 comes with a slightly smaller 6.59-inch flat AMOLED display with a 120Hz refresh rate.
