

It's easier to handle and feels more practical. Brightness crosses 1,300 nits in manual mode and can push close to 3,000 nits with adaptive brightness. Where Oppo really shines is tuning. Colours look restrained and accurate. Skin tones are natural, whites stay neutral, and nothing feels overdone. It may not look as dramatic as the Motorola, but it's easier on the eyes over long periods.

Performance and daily use

Both phones are proper flagships when it comes to performance. The Motorola Signature runs on the Snapdragon 8 Gen 5, while the Oppo Find X9 uses the Dimensity 9500.

On AnTuTu, the Motorola Signature scored around 3.1 million, while the Oppo Find X9 came in higher at roughly 3.44 million. In Geekbench, the Signature recorded 2892 in single-core and 9498 in multi-core and the Find X9 did 3142 in single and 9721 in multi-core.

So, overall, Oppo scores slightly higher, and that does translate to real-world behaviour under sustained load. In long gaming sessions or heavy multitasking, the Find X9 feels a bit more stable. The Motorola is still very fast and handles games like BGMI at around 118 to 120 FPS, but side by side, Oppo maintains performance more consistently.

For most people, this difference won't matter day to day. Both phones feel quick, smooth, and reliable. The edge only shows when you really push them.

Camera performance

Both phones use triple 50MP camera setups, but their image processing is quite different.

In daylight, the Oppo Find X9 delivers more consistent results. It captures finer details, better textures, and stronger contrast. Portraits are a clear win for Oppo, with better edge detection and more natural subject separation.

The Motorola Signature tends to brighten faces and soften skin. Some users may like this look, especially for social media. Its 50MP telephoto

camera also produces punchy zoom shots that look clean and ready to share.

In low light, both phones are good, but Oppo retains detail better and keeps noise under control more effectively.

For selfies, Motorola uses a 50MP front camera, while Oppo sticks to 32MP. Motorola selfies look warmer, while Oppo's selfies appear slightly brighter and smoother. One issue with the Motorola is occasional shakiness, which can affect sharpness.

Battery and charging

Battery life is where the gap becomes obvious. The Motorola Signature's 5,200mAh battery lasts comfortably over a full day and can stretch to a day and a half with moderate use. In the PC Mark battery test, the Signature lasted 16 hours and 4 minutes.

The Oppo Find X9, with its much larger 7,025mAh silicon-carbon battery, is in a different league. It achieved 21 hours and 2 minutes in the PCMark battery test. In the real world, it easily handles a heavy day and often goes well into the second day.

Charging speeds are almost similar. The Motorola Signature supports 90W fast wired and 50W wireless charging, while the Oppo Find X9 supports 80W fast wired and 50W wireless charging.

Software experience

This is where the two phones feel the most different.

The Motorola Signature runs Hello UI based on Android 16. It's clean, simple, and very close to stock Android. There's no clutter, no unnecessary apps, and everything feels predictable and smooth. More importantly, Motorola is promising 7 years of Android updates and 7 years of security patches. That's a big deal if you plan to keep your phone for a long time.

The Oppo Find X9 runs ColorOS on Android 16. It's feature-rich and highly customisable, with plenty of options for gestures, multitasking, and visual tweaks. There is some bloatware, though most of it can be removed. Oppo's update 5 + 6 years policy is solid, but it doesn't quite match Motorola's longer-term commitment.

Final thoughts

After spending time with both phones, their priorities become clear. The Oppo Find X9 feels like a refined all-rounder. It offers better camera consistency, a more accurate display, stronger battery life, and slightly better sustained performance. It's built for people who care about polish and endurance.

Overall, both phones are good. The right choice depends on whether you value long-term simplicity and value, or are happy to spend more for that extra layer of polish. **d**
