

Cursor, Claude and Codex

If you want to code with AI, look no further

Bhaskar Sharma | editor@digit.in

Coding has crossed a point of no return, and I say this as someone who still remembers writing code alone at 2 AM, arguing with error logs like they were stubborn people. My friends in the coding industry and I have seen many shifts, from frameworks to cloud to automation, but this one feels different. AI is no longer a side tool, but it sits next to you while you write code, reads what you mean, and often finishes your thoughts as they suggest the upcoming lines of the code you initiated. If you are coding today, you are not just choosing a language or an editor. Instead, you're choosing how much help you allow yourself. In this article we'll explore the best tools you can use if you want to code with AI.

Claude

Claude is the very first on my list of the best tools you can use if you want to code with AI. Claude isn't just an AI; rather, it feels like having a teammate you message when you are unsure about

your thoughts or next move and need assistance rather than judgements like your seniors do. Jokes apart, I've had long conversations with it about the most trivial things, like the system design, edge cases, and even whether my approach makes sense at all.

How to code using Claude

If you're wondering how you can also use Claude for coding, then let me just tell you the general steps for that:

1. Describe your problem in plain language, not perfect terms.
2. Paste snippets and ask what is wrong or how to improve them.
3. Ask for step-by-step explanations when learning something new.
4. Use it to design features before writing actual code.
5. Review logic by asking Claude to walk through it like a human.
6. Ask for trade-offs, not just solutions.

Many developers I know use Claude as a thinking partner before writing code. It doesn't rush you, but it listens, explains, and helps you reason your way forward, which is rare and valuable in fast-moving projects.

Cursor

If you don't want the hassle of switching apps and are looking for an AI tool that could be integrated within your coding environment, then Cursor is for you. The reason I included Cursor in my list of the best tools you can use if you want to
