

■ **WINDOWS 11 UPDATE**

Microsoft finally gives Windows 11 a long-requested feature

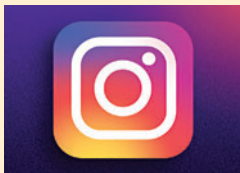

Microsoft appears to be taking user feedback really seriously, as it prepares to bring back a long-missed feature to Windows 11, the ability to move the taskbar. When Windows 11 launched in 2021, its redesigned interface removed several legacy features, including taskbar repositioning, forcing users to keep it fixed at the bottom. This decision frustrated many who preferred

placing it on the top or sides of the screen. Now, Microsoft has confirmed it is testing an update that will allow users to position the taskbar on the

top, left, or right edges as well. The feature is currently available to Windows Insiders, meaning it is still in the testing phase, with a broader rollout expected later this year. Instead of the old drag-and-move method, Microsoft is introducing simpler placement options through settings, keeping the interface clean while restoring flexibility. tinyurl.com/7dhxsaz

Instagram DMs will no longer be end-to-end encrypted

Meta is removing end-to-end encryption (E2EE) from Instagram DMs starting May 8, 2026, citing low user adoption. Unlike WhatsApp,

where encryption is default, Instagram's feature required manual activation, limiting its use. The move also reflects ongoing pressure from law enforcement and safety groups concerned about misuse of encrypted platforms. While Meta suggests users switch to WhatsApp for secure messaging, the decision raises privacy concerns. Casual users may not notice a difference, but those sharing sensitive information should consider alternatives. tinyurl.com/ug7xas

iOS users are getting new WhatsApp profiles

WhatsApp is rolling out a redesigned interface for iPhone users, replacing the traditional Settings tab with a new "You" section focused on personal

identity and account. Instead of a gear icon, users will now see their profile picture in the bottom navigation bar, making it easier to identify and switch between accounts. The new tab centralises account details while keeping core settings like privacy, chats, and notifications accessible. It is useful for those managing multiple accounts on one device. Additionally, WhatsApp is testing a refreshed profile page with a large header-style cover image. tinyurl.com/37usdh12

■ **SAMSUNG ANDROID UPDATE**

Samsung One UI 8.5 beta now available

Samsung has expanded the rollout of its One UI 8.5 beta, initially launched with the Galaxy S26 series, to several older flagship devices. Newly supported models include the Galaxy S25 series, Galaxy Z Fold 6, Z Flip 6, Galaxy S24 lineup, S24 FE, S25 FE, and the Galaxy Tab S11 series. Based on Android 16, the

update brings enhanced Galaxy AI capabilities, improved customization, and stronger security, including better

theft protection. It also introduces a redesigned Quick Settings panel, a new "Now Bar" navigation system, improved Photo Assist tools, and partial screen recording. Eligible users can access the beta through Samsung Members app. It's advised to back up data before installing due to potential instability. tinyurl.com/s6tsb37d
