Honor's robot phone at MWC 2026: Don't touch it yet!

The Mobile World Congress (MWC) 2026 started in Barcelona with some of the biggest tech companies in the world showcasing their new products and innovations. While there will be a bunch of

interesting announcements at the conference over the next few days, the one that has caught a lot of eyes on the first day is Honor's Robot phone. A completely unique and unconventional

phone that combines camera and hardware innovation with AI.

The initial prototype was teased at this year's Consumer Electronics Show and the company has given a closer look at the Mobile World Congress with fresh technical details and live demos. However, all of that came with a disclaimer – see it but don't touch. Yes, while I was able to experience the phone in action, I wasn't allowed to touch or experience it on my own.

At the heart of the concept is an unusually expressive pop-up camera gimbal. Honor has engineered it to move with striking fluidity: it can tilt like it's cocking its head, shake side-to-side to signal "no," nod in agreement and even rotate a full 360 degrees. In one demo, the camera appeared to "dance" along to music.

MWC 2026 opens under shadow of Iran-Israel-US conflict

Geopolitical tensions between Iran, Israel and the US overshadowed MWC 2026 in Barcelona. Protests and heightened security marked the event, while travel disruptions stranded

attendees across the Middle East. Several Indian representatives, including HMD, Flipkart and Nothing, cancelled. Despite boycott calls, over 30 Israeli firms participated.

Vivo X300 Ultra's India launch likely in next quarter

Vivo is ready to expand its portfolio of flagship phones in India, further increasing the pressure on Samsung, Xiaomi and other smartphone brand. For long, Vivo has limited its X series to the Pro model in India. But, this year it is set to launch

the X300 Ultra in the country as well, giving another premium option to smartphone users. The phone was showcased at the Mobile World Congress 2026 in Barcelona, kind of confirming its global launch.

And while Vivo has not officially said anything about the India launch of the device, we have learnt that the plans are to launch it in the country. That too as soon as the next quarter. With this, the Vivo X300 Ultra will be the first Ultra phone from the company to be commercially available in the country. Vivo had previously launched the X300 and X300 Pro and in all likeness should also add a foldable to its offerings later this year.
