

the compressor, and 5 years on the controller.

Price: ₹32,999

Blue Star IC318YNUS

Blue Star's residential AC lineup often focuses on durability and strong airflow. The IC318YNUS offers around 5050W cooling capacity and uses a copper condenser coil with Blue Fin anti-corrosion protection.

It supports 5-in-1 convertible cooling, Hexa Inverter technology, and DigiQ Hepta Sensors for smart cooling. It also includes built-in Wi-Fi connectivity with support for voice assistants. Among other things, you also get Anti-Corrosive Blue Fin, Comfort Sleep, and Turbo Cool. The company gives 5 years on the product and 10 years on the inverter compressor.

Price: ₹34,490

Daikin MTKL50U

Daikin MTKL50U uses the company's proprietary inverter technology with a copper compressor designed to reduce friction and refrigerant leakage. The refrigerant is R32.

The AC also uses Coanda airflow technology that directs cool air along the ceiling to distribute cooling more evenly across the room. You also get a noise level up to 35dB, stabiliser-free operation, PM2.5 Filter, Power Chill, 3D airflow, and self-diagnosis support.

You will get a 1-year warranty on the product, 5 years on the PCB, and 10 years on the compressor.

Price: ₹34,490

BRAND / MODEL	COOLING CAPACITY	ISEER
Voltas 183V Vectra CAW	4800W	3.8
Hisense AS-18TR4R3E1	4800W	3.9
Hitachi 3400SXL	5000W	3.8
Blue Star IC318YNUS	5050W	3.8
Daikin MTKL50U	5000W	4.0
Carrier CAI18EE3R36WO	4800W	3.8
Whirlpool Magicool S5K2PP0	4800W	3.9

Check this before buying

Many people don't know about this, but the ISEER (Indian Seasonal Energy Efficiency Ratio) indicates how efficiently the AC uses electricity over an entire cooling season. A higher ISEER value means the AC delivers more cooling for every unit of power consumed. For example, an AC with an ISEER of 4.5 will generally consume less electricity over time than one with an ISEER of 3.8, even if both have the same cooling capacity. In simple terms, cooling capacity determines performance, while ISEER determines running cost. Checking both helps you choose an AC that can cool their room effectively without increasing electricity bills unnecessarily.

Carrier CAI18EE3R36WO

Carrier's Ester Edge series includes Flexicool technology that allows users to adjust cooling capacity depending on room occupancy. The AC also includes a refrigerant leakage

detector and Wi-Fi connectivity. The AC uses R32 refrigerant and a copper condenser coil with anti-corrosion coating for durability. Key features include Flexicool 6-in-1 convertible cooling, Wi-Fi connectivity with app and voice control, Smart Energy Display to track power consumption, HD and PM 2.5 filters, turbo cooling mode, and a refrigerant leakage

detector. It also supports stabiliser-free operation across a wide voltage range and includes standard features such as auto restart, sleep mode, and dehumidification.

The AC comes with a 1-year standard product warranty, along with a 5-year

warranty on the PCB and a 10-year warranty on the compressor (terms and conditions apply). Buyers can also opt for an extended warranty of 4 additional years after the initial 1-year standard warranty.

Price: ₹34,490

Whirlpool 3DCool Pro Plus EXP S6M2PP0

The 1.5-ton model uses the company's inverter compressor paired with Whirlpool's XPAND 6-in-1 convertible cooling technology, allowing users to adjust cooling capacity depending on room conditions and occupancy.

The AC also includes Whirlpool's 6th Sense technology, which uses built-in sensors to monitor temperature and automatically adjust cooling performance. One of the key highlights is the brand's 3D technology with 3D air modes and 4-way swing. For quick cooling, it has Turbo Chill mode.

The AC uses a copper condenser coil and R32 refrigerant. Its BLDC fan motor is designed to improve efficiency while keeping noise levels relatively low. Whirlpool offers 10 years compressor warranty and 5 years of PCB warranty.
