

Best pedestal fans to stay cool

THEY ARE FAR MORE PORTABLE THAN CEILING FANS

Agent001 | editor@digit.in

With summer temperatures rising across many parts of India, some of us may want to use pedestal or farrata fans to get relief from the high temperatures. They are portable and relatively affordable ways to improve airflow at home. This guide highlights some of the notable pedestal and farrata fans available in India in 2026 based on key specifications such as airflow, motor type, and power consumption.

The list mainly emphasises the pedestal fans with a 400mm sweep size, as it is a good starting point. Beneath each of the contenders, we have also included the farrata or higher sweep size alternatives.

Note: Pedestal fans don't lower the room temperature; rather, they accelerate evaporation of sweat and replace the warm air around you. The rate at which air is moved every minute is called Air Delivery, measured in cubic metres per minute (CMM). And RPM (rotations per minute) indicates how fast the fan blades spin.

Orient Electric Stand-82

The Orient Stand-82 focuses on high airflow through blade design rather than extremely high RPM. Despite operating at roughly 1330 RPM, the fan claims an airflow of 90 CMM.

It uses aerodynamically designed resin blades and a copper motor

while consuming about 53W to 58W of power. This makes it one of the stronger airflow options in the standard pedestal fan category.

It comes with 2 year warranty.

Price: ₹2,549

You can also consider the Crompton Storm 450 mm, 1400 RPM model for Rs 4,750.

Crompton Wave Plus

The Wave Plus operates at around 1,330 RPM and can deliver 85 CMM airflow, which is nice.

The motor consumes about 60W to sustain this speed. The noise level is 70 decibels. The fan's height is adjustable. The brand mentions thermal overload protection for the motor's longevity.

Crompton gives a 2-year warranty on this pedestal fan.

Price: ₹2,549

You can also consider the Crompton HighSpeed Torpedo with 2,100 RPM at ₹2,999.

V-Guard Esfera

The V-Guard Esfera is built around a copper motor operating at around 1300 RPM. It delivers roughly 70 CMM airflow while consuming around

55W. It is both a pedestal and a table fan, which is pretty cool.

Some variants of the Esfera include remote operation and timer features. The motor also uses CRNO lamination, which helps improve electrical efficiency and reduce energy loss over time.

V-Guard also assures a 24-month warranty care.

Price: ₹2,649

You can also consider V-Guard Gati-maan Pro with 2100 RPM and 400mm sweep size at Rs 3,150.

Usha Maxx Air Ultra

The Usha Maxx Air Ultra uses a 400mm sweep size with a copper motor and runs at around 1350 RPM. The fan delivers roughly 70 CMM airflow while consuming around 55W of power.

Key features include an auto thermal protector to prevent overheating, smooth oscillation, and tilt adjustment for directional airflow. The design focuses on everyday reliability rather than advanced smart features.

Usha gives 2 years warranty on this fan.

Price: ₹2,699
