

achieved an overall score of 1,506. For gaming, I tested BGMI and Call of Duty Mobile. In BGMI, the Vivo V70 supports gameplay at up to 60fps, and the experience was stable with minor frame drops. In Call of Duty: Mobile, the phone can go up to 90fps, and again, performance remained smooth. That said, at this price point, some competitors are already offering 120fps support in both BGMI and CODM, so if gaming is your top priority, that's something worth keeping in mind.

Overall, performance on the Vivo V70 is solid and reliable, but it's more for consistency than pushing FPS.

CAMERA PERFORMANCE

The Vivo V70 comes with a triple camera setup featuring a 50MP OIS main camera, an 8MP ultra-wide camera, and a 50MP OIS telephoto camera, all tuned in collaboration with Zeiss. The Realme 16 Pro Plus, on the other hand, offers a 200MP main camera, an 8MP ultra-wide camera, and a 50MP telephoto lens.

On the main camera, the Realme's 200MP sensor clearly shows its strength when it comes to details.

When it comes to human subjects, while the Realme does capture good detail, the Vivo's photos look more appealing and more social-media ready.

Portraits are where the Vivo V70 really pulls ahead. Portrait shots from the telephoto lens look excellent.

In low-light photography, after taking multiple samples, the Vivo V70 consistently captured more detail and better exposure compared to the Realme 16 Pro Plus. The difference is clearly visible in the images.

Ultra-wide performance is also better on the Vivo, even though both phones use 8MP sensors. The Realme tends to soften images, while the Vivo manages to retain more detail.

On the front, both phones feature 50MP selfie cameras. In normal mode, the Realme adds a bit more brightness to faces, but its portrait mode has better edge detection.

For video, both phones support recording up to 4K at 60fps, and the output is decent but not class-leading.

BATTERY LIFE AND SOFTWARE

Despite being just 7.59mm thin, the Vivo

V70 packs a large 6,500mAh battery, and that combination works really well in real-world usage. On moderate to heavy use, the phone easily lasts a full day, and with lighter usage, stretching into the second day isn't difficult.

To put a number on this, I ran the PCMark battery test, and the Vivo V70 scored an impressive 25 hours and 27 minutes. That's a strong result, especially considering the phone's slim profile and relatively compact size compared to other big-battery phones.

Charging is another highlight. The Vivo V70 supports 90W fast charging and goes from 0 to 100% in about 60 minutes. Given the battery size, that charging speed makes the phone very convenient for daily use, especially if you're someone who tops up quickly before heading out.

VERDICT

The Vivo V70 is a phone that knows exactly what it wants to be: a camera-first smartphone that no longer forces you to compromise elsewhere. It delivers excellent portrait photography, reliable low-light performance, a vibrant display, strong battery life, and fast charging, all wrapped in a slim and premium design.

It may not score the best benchmark scores or feature the most aggressive specs, but in real-world usage, it feels polished and dependable.

—Siddharth Malhotra

SPECIFICATIONS

Processor: Snapdragon 7 Gen 4 | Memory: 8 GB LPDDR5X | Storage: 256 UFS 4.1 | Display: 6.59-inch 1.5K AMOLED display | Refresh rate: 120Hz | Brightness: 3160 nits | Operating System: OriginOS 6 | IP rating: IP68 and IP69 | Battery: 6500 mAh | Charging: 90W Wired | Camera (Rear): 50MP + 50MP + 8MP | Camera (Front): 50MP
