

REAL MOMENTS BEAT POLISHED CONTENT

SNAPCHAT'S CREATOR SHIFT IN INDIA

Jayesh Shinde | editor@digit.in

For Saket Jha Saurabh, Director & Head - AR & Content Partnerships, Snap Inc, India's creator economy is shifting from performance to participation. On Snapchat, creation begins not with virality, but with connection — fuelled by authenticity, regional voices, and community-driven storytelling.

What do people not know about Snapchat in India?

Young India today is a nation of creators. And that's exactly where Snapchat's creator ecosystem in India begins. It's not built as a platform to perform, but as a place to connect. Creation here doesn't start with the pressure to go viral; it starts with sharing real moments with your inner circle. What's also unique is how deeply local and inclusive this ecosystem has become. Much of the growth is coming from beyond metros, across languages and regions, with creators reflecting their own realities along with cultural contexts and nuances. This long-tail of creators,

rather than just a concentration at the top, is where a lot of meaningful engagement is being driven.

How's Snapchat contributing to India's creator movement?

Snapchat in India has seen strong momentum over the past few years, with over 250 million users, engagement doubling, Spotlight content growing 4X year-on-year, and the Snap Star community increasing by 1.5X. This reflects how the platform and its creator ecosystem have evolved, not just in scale, but in depth of engagement.

At the core of this evolution is Snapchat's camera-first design, which enables a more in the moment, visual, and everyday form of storytelling, allowing creators to share more personal experiences with their audiences. Across entertainment, Snapchat has become the platform of choice for cultural leaders who value genuine connection. What's been most rewarding to see is this shift towards authenticity

and deeper engagement, with creators building meaningful communities and the platform supporting it through AR, intuitive tools, and monetisation opportunities.

How is Snapchat using AI to preserve, protect and grow the platform?

From the beginning, Snapchat has been about helping people express themselves visually and connect in real time with tools that let you take an idea or a feeling, and bring it to life instantly via the camera. As AI has evolved, we've embraced it as a way to extend that same mission, making it easier to create, imagine, and share moments in ways that feel natural and personal in the moment.

Many of our most distinctive AI experiences start with the camera. From early ML-powered Lenses to today's generative tools and on-device models, we're using AI to turn the camera into an even more powerful creative surface one that helps people express ideas, moods, and moments visually, in real time.

What's your message to anyone in India who wants to become a creator on Snapchat?

On Snapchat, anyone can be a creator; it really starts with how you show up and express yourself. The platform is designed to support that journey, so whether you're sharing everyday moments or building a larger audience, the tools help you evolve in your growth.

What we are seeing more broadly in India is a shift towards content that feels more personal, conversational, and rooted in lived experience. Snapchat fits into this shift by enabling creators to grow through authentic engagement rather than follower-driven visibility. For anyone starting, the emphasis should be on consistency and authenticity. The ecosystem is designed to support that journey.
