

SOUND QUALITY

The Galaxy Buds 4 Pro come with a dual-driver or 2-way speaker setup. There is a woofer for handling bass and a tweeter for handling treble. Samsung phones get the proprietary codec-based UHQ sound, but if you stream on Spotify or YouTube, this won't make a notable difference.

What matters, though, is the engaging sound you get out of the box on the Galaxy Buds 4 Pro. It offers sharper detail and stronger separation than AirPods Pro 3 (review), but it can feel slightly aggressive at times.

Both earbuds handle high frequencies well, with a good amount of detail in the upper range. On the Galaxy Buds 4 Pro, highs come through sharper and more pronounced. In tracks like 'November' by Max Richter and 'Goshintai' by Radwimps, the violin reaches higher and feels more cutting, while in 'Dawn Of The Iconoclast' by Dead Can Dance, the upper vocal layers feel more spread out and elevated.

In the low end, the Galaxy Buds 4 Pro deliver tighter and more impactful bass. In 'Bad Guy' by Billie Eilish, the hits feel sharper and more defined, and the claps in 'Rang De Lal' from Dhurandhar land with more force.

With complex tracks like 'Pull Me Under' by Dream Theater, the AirPods tend to blend elements together, where beats can slightly overpower vocals. The Galaxy Buds 4 Pro offer better separa-

tion, making it easier to pick apart instruments and notice finer details. Even distortion is well controlled on the Galaxy Buds 4 Pro in songs like 'Centuries' by Fall Out Boy.

In another dense track like 'Selkies' by Between the Buried and Me, the Galaxy Buds capture more instrument detail than the AirPods, but at times this can feel slightly overwhelming or a bit harsh on the ears.

Still, I'd say the tuning handles vocals well, and instruments carry ample details. The soundstage is spacious with good positioning. And if you are streaming videos or playing online games, the latency is also under check. I didn't face any syncing issues in my use.

ANC AND CALL CLARITY

This was one area I was most interested

in testing, as I tend to use my earbuds a lot at the office, while commuting, etc. The ANC performance on this buds is strong. I was listening at the max setting most of the time and occasionally dabbled around with the adaptive mode.

The Galaxy Buds 4 Pro dampen low-frequency noise very well, such as traffic, AC hum, and general background chatter. But, there is slight dark noise pressure, and some voices and sudden sounds can still come through. This is noticeable when you look for it with the music off. So, it shouldn't be a problem.

The Ambient Sound mode is impressive. There is minimal hiss, but surrounding sounds come through pretty clearly. It is therefore highly usable.

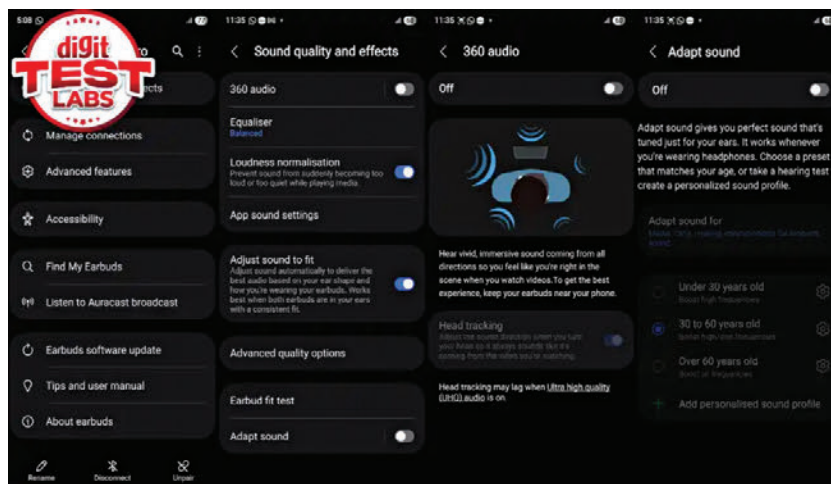

VERDICT

The Samsung Galaxy Buds 4 Pro are a solid upgrade and a well-rounded option in the premium segment. They offer a distinct and comfortable design, engaging and impactful sound, strong ANC, great call quality, and a feature-rich app with customisation.

Some of these features work best or work at all with a Samsung device. Overall, the restrictions are less limiting than Apple's. I would have appreciated it if Samsung had given more controls.

What you get here is more than enough. You get granular EQ support and features like Auracast that something like the AirPods Pro 3 doesn't offer. If you want lively and enjoyable sound, strong features and performance, you can consider the Galaxy Buds 4 Pro.

—G. S. Vasan

SPECIFICATIONS

Drivers: Enhanced 2-way | Codec: SSC-UHQ, AAC, SBC | Mics: 6-mic system (3 per bud) | Battery (Earbuds): Upto 6 hours | Battery (Case): 26-30 hours | Charging: USB-C and Qi Wireless | Connectivity: Bluetooth 6.1 | IP Rating: IP57
