

netic Back Clip for sustained thermal management during long sessions.

The G2 Wi-Fi chip, shared with the OnePlus 15, deserves a mention here too. It delivers stronger reception through walls and congested networks, with up to 1.6x reduced latency in gaming scenarios which is a tangible advantage for competitive online play.

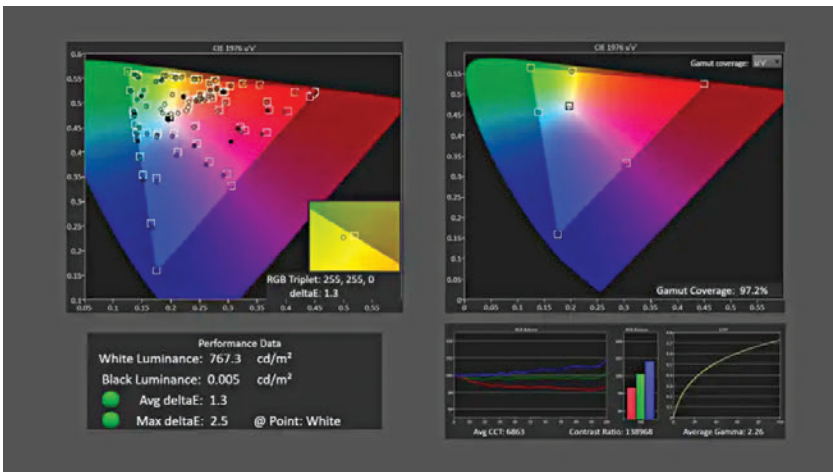

BATTERY LIFE

If the Nord 5's 6,800 mAh battery was impressive, the Nord 6's 9,000 mAh silicon-carbon cell is outright ridiculous in the best possible way. OnePlus claims 2.5+ days of moderate use, with up to 26.9 hours of YouTube streaming and 16.6 hours of Google Maps navigation on a single charge.

In our PCMark Work 3.0 battery test, the Nord 6 recorded a staggering 33 hours and 26 minutes, more than double the Nord 5's excellent 15 hours and 35 minutes. This is power bank territory crammed into an 8.5mm phone.

In real-world use, battery anxiety simply doesn't exist with this phone. A heavy day of social media, camera use, navigation and streaming will still leave you with charge to spare at bedtime. For lighter users, three days between charges is entirely achievable.

Charging remains at 80W SUPERVOOC, same as the Nord 5 and takes the larger battery from 0 to 100% in roughly 60–65 minutes. It's not the fastest charging in the segment, but OnePlus

has made a clear trade-off: endurance over speed and it's the right call. A quick 5-minute top-up delivers about 2.5 hours of YouTube streaming.

Bypass Charging returns with upgrades for 2026, routing power directly to the chipset during gaming to keep thermals low and extend long-term battery health. What's new with this generation is 27W wired reverse charging and for good reason. With a 9,000 mAh cell, the Nord 6 can genuinely serve as an emergency power bank for your earbuds, smartwatch or even another phone.

VERDICT

The OnePlus Nord 6 is the most complete mid-range phone OnePlus has ever built. It doesn't just incrementally improve over the Nord 5, it leaps

forward in nearly every meaningful department. The 9,000 mAh battery is segment-redefining, the Snapdragon 8s Gen 4 with 165 FPS gaming makes the benchmark debate moot for everyday users, the display is flagship-grade along with its durability credentials make it the heavyweight in this category.

The Nord 6 doesn't just compete in the Rs35,000–45,000 segment, it sets the terms of competition. If you want raw benchmark bragging rights, there may still be alternatives. But if you want the phone that does everything well, lasts for days, games like a flagship and is built to survive years of daily use, the Nord 6 is the phone to beat. OnePlus hasn't just raised the bar for the Nord, it's raised it for the mid-range category.
