

IZI Brephos

Indian-branded drone ready for prime time?

The IZI Brephos has landed in India at a rather interesting moment. Indian drone brands are finally moving beyond budget-friendly toys, and this one flies into the premium-consumer space with a bold proposition: cinematic hardware at a price that undercuts most Chinese rivals. At ₹1,19,999, it is not cheap, but the spec sheet reads like a wishlist.

At the heart of it sits a 1-inch CMOS sensor capable of 48MP stills and 4K video at 60fps with HDR 2.0. The three-axis gimbal does its job well, keeping footage rock-steady in moderate wind. The real party trick, however, is the NightSight Ultra low-light mode. Paired with the ISO 100–100000 range, it turns dim cityscapes into usable footage without drowning them in noise.

Range is a strong suit. The 24km transmission is generous, and I never experienced dropouts. All-direction obstacle avoidance, powered by LiDAR and vision sensors, inspires confidence while tracking subjects. Flight time of

around 53 minutes per battery is class-leading for this segment.

Where it stumbles is the companion app, which still feels a touch unfinished, and the 720g frame makes it less portable than sub-249g featherweight rivals. But if you want serious aerial capability, the Brephos makes for India's most compelling consumer drone today.

SPECIFICATIONS:

Camera Sensor: 1-inch CMOS, 48MP | **Video:** 4K @ 60fps with HDR 2.0 | **ISO Range:** 100–100000 | **Gimbal:** 3-Axis Stabilization | **Zoom:** 6x | **Transmission Range:** 24 km (IZI R7) | **Obstacle Avoidance:** All-Direction LiDAR + Vision Sensors | **Night Mode:** NightSight Ultra (Luna Vision) | **Flight Time:** Up to 53 minutes per battery | **Weight:** 720 g | **Storage:** Expandable up to 256 GB | **GPS:** Enabled (Smart Return-to-Home) | **Battery:** 3000 mAh PowerSafe

Emotorad Ranger

Has the e-cycle segment grown in India

I have been cycling for years and navigated much of my adult life on a scooter, so when I got the EMotorad Ranger, I had a decent sense of what to expect from both sides. After a month of riding around Mumbai, I have a clear picture of what this thing actually is.

The Ranger turns heads – the wide 4.0-inch fat

tyres, long stretched-out seat, headlamp grille, and integrated indicators give it a rugged, moto-inspired look. Whether it works depends entirely on your taste. Some people I met loved it; personally, it's not quite my style.

The Ranger runs a 250W rear hub motor with a 48V, 12.75Ah removable battery. Five pedal assist levels make a noticeable difference, on uphill and construction-riddled stretches, mid-to-high assist pulled without issue.

The throttle, however, feels binary rather than gradual, catching you off guard at junctions. I ended up relying almost

entirely on pedal assist for pick-ups from signals.

Real-world range sat around 55–65 km in mixed usage. The removable battery weighs just under 3 kg, making indoor charging easy. If you are under 5'9, go for the medium variant. The seat is not height-adjustable, which can become an issue when stopping and starting constantly in city traffic.

SPECIFICATIONS:

Frame: High Tensile Steel | **Gears:** Shimano Tourney TZ500 - 7 Speed | **Range:** 60–75 km | **Speed:** 25 km/h | **Display:** Cluster C6+ | **Battery:** 48V 12.75 Ah Li-ion | **Tyre:** 20" x 4.0" Nylon
