

In Britain, more than 10,000 people worked to break the Enigma code at a top-secret base called Bletchley Park, or “Station X.”

Some of the world's first computers were used at Bletchley Park, designed by top scientists and engineers like Alan Turing.

On October 30, 1942, three British sailors rescued a working Enigma machine from a sinking German U-boat.

These machines helped Britain break Enigma, and control the sea.

Victory!

Germany's control of the sea was broken. On May 7, 1945, Germany surrendered.
