

What is an algorithm?

Coders often develop a set of steps or instructions called an algorithm before they write any code. For example, programming a robot to put on a pair of socks might follow this simple algorithm.

Step

1

Locate the sock

Step

2

Pick up the sock

Step

3

Place sock on one foot

Step

4

Repeat steps 1-3 for other foot

The robot ignores the blue doors.

The robot turns left or right when it hits a wall.

The robot enters the maze.

The robot ignores the red doors.

The robot opens and moves through the green doors.
