

Ook! is a programming language that was created as a joke by David Morgan-Mar. Not intended for serious use, the instructions have been changed into Orangutan words. These are "Ook!," "Ook!," and "Ook?." They can be put together to make commands.

Computer code in Ook! language

```
class Hello, WorldApp{
    public static void main (String[] args){
        System.out.println("Hello World!");
    }
}
```

```
<?php
echo"Hello, World!;
?>
```

when clicked

say Hello, World

BASIC is one of the oldest programming languages. It stands for Beginner's All-Purpose Symbolic Instruction Code.

Each line of code starts with numbers.

C is one of the world's most widely used languages, but it can be tricky to learn. It is often used to make software that needs to run fast.

The C program starts with a hash symbol (#).

Scratch was created to teach beginners how to code. Instead of typing out code, readymade blocks are used to build instructions.

Scratch uses colored blocks to build code.
