FACT FILE

» **When:** Late Cretaceous

» **Length:** 30 ft (9 m)

» **Fun fact:** Baby Triceratops had stubby little horns, which grew bigger and curved forward in adulthood.

! WOW!

Triceratops fought **fierce duels** with rivals by charging and locking horns!

FACT FILE

» **When:** Late Cretaceous

» **Length:** 20 ft (6 m)

» **Fun fact:** The nose horn of Einiosaurus was straight when young and curved as it grew older.

Pentaceratops

With five horns on its face, including a horn on each cheek, Pentaceratops was able to charge at predators and inflict serious damage. A tough beak could tear through plants like leafy ferns easily.

FACT FILE

» **When:** Late Cretaceous

» **Length:** 26 ft (8 m)

» **Fun fact:** A Pentaceratops skull remains the longest skull of any land animal ever found, measuring 10 ft (3 m).
