

Giraffatitan

Long neck
to reach
tall trees.

Giant teeth

This terrifying 8 in (20 cm) tooth belonged to T. rex. This monster carnivore had huge jaws, which contained up to 60 pointed teeth. They were strong enough to bite clean through bone and to tackle the heavy armor of ankylosaurs like Ankylosaurus. A bite from a T. rex was 50 times more powerful than a human's!

LIFE SIZE!

Pointed tip and
serrated
edge.

Carnivore teeth
were often
chipped and
damaged by use.

! WOW!

Dinosaurs
continually **grew**
and **replaced** their
teeth throughout
their lives.
